Smart Buyer's Guide to Buying Or Leasing a Car

How does a suburban pizza joint end up profiled on national magazine covers and network TV news? (Hint: The secret is not in the sauce.) When Nick Sarillo decided to open a family-friendly pizza restaurant in the suburbs of Chicago, people thought he was nuts. Having worked as a carpenter for much of his adult life, he

lacked any formal experience in restaurants or in managing a small business. Everyone told him no one else would ever care about his place the way he did. They warned he'd have to work 20-hour-days and monitor every employee just to stay in business. But Sarillo saw things differently, and set out to run his business in a radically different way. Today Nick's Pizza & Pub is one of the top ten busiest independent pizza restaurants in the country, with two locations that gross about six times the revenue of the typical pizza restaurant. And in an industry where most employees leave within less than a year, Nick's annual turnover rate is less than 20 percent. How did he do it? The secret lies in Nick's purpose-driven culture, in which every employee—from the waiters to the chefs to the managers—is equipped with the tools necessary to do their jobs while also advancing the company's overall mission. The result is higher sales, a dedicated team, and a big little business that is beloved by the entire community. In *A Slice of the Pie* Sarillo tells the story of how he built his extraordinary culture and shows how anyone can follow his methods. For instance, Nick's managers engage the staff by tracking and rewarding unusual metrics, such as how many guests request a particular server or the average check amount of each carryout host. Likewise, team members of all ages and levels of experience are encouraged to express themselves, acquire new skills, and suggest ideas to help the business grow. *A Slice of the Pie* will help transform even the smallest, simplest, and most ordinary business into a successful, high-performance organization.

The Shadow Cabinet

In this book, Nicolas Van de Walle identifies 26 countries that are extremely poor and grew little if at all in the 1990s. His sample excludes North Korea and countries where civil war explains some of their failure to grow (Afghanistan, Sierra Leone, Sudan, Tajikistan and others). The 26 countries have limited infrastructure and human capital and the small size of their markets deter private savings and investment. Aid was meant to help overcome these problems, and these countries received a lot. Yet they have failed to grow. What is wrong? Is foreign aid a solution or part of the problem? What changes might make aid more effective? Given these countries require the financial and technical resources of the West, why haven't aid programs made a difference? Van de Walle blames their economic failure mostly on the venality and incompetence of their political leadership. He analyzes the contradictions and tensions faced by the aid community in poorly run countries, providing a sobering analysis of the perverse effects of aid where the politics is all wrong. Too often, resources provided by foreign aid keep the wrong government in office, and undermine adoption of economic as well as political reforms. Bad government combined with aid, in short, hurts poor countries - and particularly the poorest people in those countries. Despite good intentions, little progress has been made in implementing announced "reforms" of the aid business itself. A constituency for reform is lacking, in the donor countries and in the recipient countries, where those in power benefit from the status quo.

"Fabrics of Freedom" is the saga of a family whose origins are in the Marches of Scotland. Tragedy, born of the desire to live free, gives birth to one desperate challenge after another as Robbie Liddle is swept toward his destiny on the battlegrounds of America's War for Independence. The deaths of his father and maternal grandfather conspire to send his mother, grandmother, and uncle on the perilous journey across the Atlantic in hopes of founding a tailor shop. This dream was inspired by the contents in his grandfather's chest of tools of the trade. Through shipwreck and financial hardship, they are led to the possibility of freedom in the Township of Leacock, County of Lancaster, Proprietorship of Pennsylvania. In spite of physical challenges, Robbie displays hereditary skills in the demands of tailoring. Bondage to his uncle, however, arouses in him the first yearning for freedom. With his best friend, Robbie flees northeastward to West Jersey. His wit and charm, inherited from the father he never knew, combined with the skills learned at his mother's knee, enable Robbie to find a new kind of freedom in the arms of the maiden who captured his heart--Miss Isabella Barclay. The Jerseys, however, are directly in the path of the coming conflict for a national freedom. Back and forth across what would become the third State among the United States, the forces of the British and the Continentals bloody the soils of this tiny colony. For the sake of freedom from such bondage to England, Robbie enlists in the New Jersey Militia. His military experiences in places like Brandywine and Monmouth and Valley Forge provide fodder for the tales he will spin throughout the rest of his long life. The tailor becomes the teller of tales. Heroes of such world-

changing conflicts are not entirely the general officers, but the citizens who answer the call to risk their lives in the cause of freedom. Every chapter of Robbie Liddle's story is loosely connected with the various fabrics and materials with which he worked and in which he and his family dressed. Together they create that wonderful quilt of a life that rejoices in a liberty that is never free.

Overcoming Stagnation in Aid-dependent Countries

This book has been developed from its earlier and far less formal presentment as the proceedings of a symposium entitled The Biochemistry of S-Adenosylmethionine as a Basis for Drug Design that was held at the Solstrand Fjord Hotel in Bergen, Norway on June 30-July 4, 1985. The purpose of the symposium was to bring together scientists from various disciplines (biochemistry, pharmacology, virology, immunology, chemistry, medicine, and so on) to discuss the recent advances that have been made in our understanding of the biological roles of S adenosylmethionine (AdoMet) and to discuss the feasibility of utilizing AdoMet-dependent enzymes as targets for drug design. Thus the information provided herein will be of value not only to basic scientists involved in elucidating

the role of AdoMet in biology, but also to medicinal chemists who are using this basic knowledge in the process of drug design. The volume should also be of interest to pharmacologists and clinicians involved in biological evaluation of potential therapeutic agents arising from the efforts of the biochemists and medicinal chemists. Each plenary speaker at the symposium was requested to submit a chapter reviewing recent contributions of their discipline to our base of knowledge about the biological role of AdoMet. Topics covered in this volume include protein and phospholipid methylations (Section A), nucleic acid methylations (Section B), the regulation of AdoMet, S-adenosylhomocysteine, and methylthioadenosine metabolism (Section C), clinical aspects of AdoMet (Section D), and the design, synthesis, and biological evaluation of trans methylation inhibitors (Section E).

Hydrogen Fuel Cells for Road Vehicles addresses the main issues related to the application of hydrogen fuel cell technology in the road transportation sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion engine) used for moving people and goods. The authors deal, in particular, with the problems that can hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. Hydrogen Fuel Cells for Road Vehicles also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the analysis of two practical case studies on fuel cell propulsion systems. Hydrogen Fuel Cells for Road Vehicles is a useful text for researchers, professionals and advanced students in the fields of automotive and environmental engineering.

In light of the tremendous changes that have come to the island of Borneo in recent decades, this volume takes a detailed historical look at the Borneo environment from native, colonial and national perspectives. It examines change and continuity in the economic, political and social dimensions of human-environment interactions. Reflecting the increasingly multidisciplinary nature of environmental history, the book brings together an international group of historians, anthropologists, geographers and social foresters, all looking through a historical lens at the environment in the Malaysian states of Sabah and Sarawak, and the Indonesian province of Kalimantan and Brunei. Drawing on extensive archival research and fieldwork, these ten original contributions encompass eleven centuries of history on Borneo, examining interrelated topics that include long-distance trade, conservation, land tenure, resource access, property rights, perceptions of the environment, migration, and development policy and practice. The chapters in this volume are extensively revised versions of selected papers presented at an international seminar on "Environmental change in native and colonial histories of Borneo: Lessons from the past, prospects for the future" held in Leiden under the auspices of the International Institute for Asian Studies.

An understanding of the developments in classical analysis during the nineteenth century is vital to a full appreciation of the history of twentieth-century mathematical thought. It was during the nineteenth century that the diverse mathematical formulae of the eighteenth century were systematized and the

properties of functions of real and complex variables clearly distinguished; and it was then that the calculus matured into the rigorous discipline of today, becoming in the process a dominant influence on mathematics and mathematical physics. This Source Book, a sequel to D. J. Struik's Source Book in Mathematics, 1200-1800, draws together more than eighty selections from the writings of the most influential mathematicians of the period. Thirteen chapters, each with an introduction by the editor, highlight the major developments in mathematical thinking over the century. All material is in English, and great care has been taken to maintain a high standard of accuracy both in translation and in transcription. Of particular value to historians and philosophers of science, the Source Book should serve as a vital reference to anyone seeking to understand the roots of twentieth-century mathematical thought.

The Kirkwood Highway is an almost six-mile portion of State Route 2 in New Castle County, Delaware. Built as a bypass of Marshallton after the opening of Delaware Park at Stanton in 1937, it was meant to provide Wilmington-area horse-racing fans a straighter and faster route to the track. It is named after a distinguished officer of the American Revolution, Robert Kirkwood Jr., who was born at his family's farm along Polly Drummond Hill Road in Newark in 1756. Since it opened to automobile traffic, the highway has undergone numerous renovations and the scenery along its route has changed dramatically. Today, it is the fifth-busiest roadway in the state and is lined by shopping centers, national retailers, fast-food and chain restaurants, gas stations, subdivisions, and historic sites. Through vintage photographs, Along the Kirkwood Highway takes a nostalgic look back at the travel corridor, its cross streets, and familiar sites along its path."
