Risk-adjustment practices consider chronic diseases as predictors of future healthcare needs and expenses. Detailed documentation and compliant diagnosis coding are critical for proper risk adjustment. Risk Adjustment Documentation & Coding provides:

- * Risk adjustment parameters to improve documentation related to severity of illness and chronic diseases.
- * Code abstraction designed to improve diagnostic coding accuracy without causing financial harm to the practice or health facility. The impact of risk adjustment coding--also called hierarchical condition category (HCC) coding--on a practice should not be underestimated:
- * More than 75 million Americans are enrolled in risk-adjusted insurance plans. This population represents more than 20% of those insured in the United States.
- * Insurance risk pools under the Affordable Care Act include risk adjustment.
- * CMS has proposed expanding audits on risk adjustment coding. Meticulous diagnostic documentation and coding is key to accurate risk-adjustment reporting. This book will help align the industry through an objective compilation and presentation of risk adjustment documentation and coding issues, guidance, and federal resources.

Features and Benefits

- * Five chapters delivering an overview of risk adjustment, common administrative errors, best practices, topical review of clinical documentation improvement and coding for risk adjustment alphabetized by HCC group, and guidance for development of internal risk adjustment coding policies.
- * Six appendices offering mappings, tabular information, and training tools for coders and physicians that include an alphanumeric mapping of ICD-10-CM codes to HCCs and RxHCCs and information about Health and Human Services HCCs versus Medicare Advantage HCCs.

Learning and design features:

- Vocabulary terms highlighted within the text and conveniently defined at the bottom of the page.
- "Advice/Alert Notes" that highlight important advice from the ICD-10-CM Guidelines for Coding and Reporting.
- "Key Coding Concepts" that offer the advice published in ICD-10-CM Coding Clinic for ICD-10-CM and ICD-10-PCS.
- "Sidebars" that detail measurements pertinent to risk adjustment seen in physician documentation, eg., cancer staging, disability status, or GFRs.
- "Coding Tips" that guide coders to the right answers (using terminology and ICD-10-CM Index and Tabular entries) or provide cautionary notes about conflicts in the official ICD-10-CM guidance.
- "Clinical Examples" that underscore key documentation issues for risk adjustment.
- Clinical coding examples that provide snippets or full encounter notes and codes to illustrate key issues for the HCC or RxHCC.
- "Documentation tips" highlight recommendations to physicians regarding what should be included in the medical record or how ICD-10-CM may classify specific terms.
- "Examples" that explain difficult concepts and promote understanding of those concepts as they relate to a section.
- "FYI" call outs that provide quick facts.

- * Extensive end-of-chapter "Evaluate Your Understanding" sections that include multiple-choice questions, true-or-false questions, and Internet-based exercises.
- * Downloadable slide presentations for each chapter that cover key content and concepts.
- * Exclusive content for academic educators: A test bank containing 100 questions and a mock risk-adjustment certification exam with 150 questions

3,2,1 Code It!

Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert

opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

ICD-10-CM Official Guidelines for Coding and Reporting - FY 2020 (October 1, 2019 - September 30, 2020)

Provides clinical descriptions diagnostic guidelines and codes for all mental and behavioural disorders commonly encountered in clinical psychiatry. The book was developed from chapter V of the Tenth Revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10). The clinical descriptions and diagnostic guidelines were finalized after field testing by over 700 clinicians and researchers in 110 institutes in 40 countries making this book the product of the largest ever research effort designed to improve psychiatric diagnosis. Every effort has been made to define categories whose existence is scientifically justifiable as well as clinically useful. The classification divides disorders into ten groups according to major common themes or descriptive likeness a new feature which makes for increased convenience of use. For each disorder the book provides a full description of the main clinical features and all other important but less specific associated features. Diagnostic guidelines indicate the number balance and duration of symptoms usually required before a confident diagnosis can be made. Inclusion and exclusion criteria are also provided together with conditions to be considered in differential diagnosis. The guidelines are worded so that a degree of flexibility is retained for diagnostic decisions in clinical work particularly in the situation where provisional diagnosis may have to be made before the clinical picture is entirely clear or information is complete. As befitting a publication of considerable influence the amount of work that went into preparing ICD-10 has been formidable - The International Journal of Social Psychiatry
