Now available in two versions rather than three, this introduction to computers book is one that users will engage with -- maintaining the encyclopedic approach in the popular magazine style. It is refreshing, accurate, and easy to learn from-written to today's reader. The Eighth Edition moves the emphasis to connectivity and includes loads of new research to ensure that the statistics in the book are current. This edition emphasizes emerging technologies while de-emphasizing older technologies. The Complete version is chapters 10-14 of the Introductory version (with one Spotlight at the end on Emerging Technologies). Covers Careers and Certification,

Programming, Databases and Information Systems, Systems Analysis and Design, and Enterprise Computing. For anyone wanting a basic knowledge of computers to apply to their jobs or lives.

Macworld

Is Your Computer Bugged?

* Appleman is a well-known, bestselling author of computing titles; has a great writing style and has valuable input/review on content from a teen focus group of technology users. * Contains the fundamentals that every teen should know: emphasizes protection of computers from viruses, and privacy issues (including identity theft), not just the usual online security that is hyped by the media. Emphasizes topics of interest to teens – for example: security on instant messaging and configuring firewalls for online gaming. * Unlike other security books written for parents, this book is written to empower teens to protect themselves and their computers. It requires no effort on the part of parents beyond buying the book and handing it to their teens. * Offers practical, well-researched much needed

advice on how to protect teens and create a more secure home computing environment. (The author's survey showed over 50% of teens have had a computer virus. A recent Newsweek article describes how Oberlin college found viruses on 90% of the Windows machines of incoming freshmen).
