While most texts focus on how and why electric circuits work, *The Analysis and Design of Linear Circuits* taps into engineering students' desire to explore, create, and put their learning into practice. Students from across disciplines will gain a practical, in-depth understanding of the fundamental principles underlying so much of modern, everyday technology. Early focus on the analysis, design, and evaluation of electric circuits promotes the development of design intuition by allowing students to test their designs in the context of real-world constraints and practical situations. This updated Ninth Edition features an emphasis on the use of computer software, including Excel, MATLAB, and Multisim, building a real-world problem-solving style that reflects that of practicing engineers. Software skills are integrated with examples and exercises throughout the text, and coverage of circuit design and evaluation, frequency response, mutual inductance, ac power circuits, and other central topics has been revised for clarity and ease of understanding. With an overarching goal of instilling smart judgement surrounding design problems and innovative solutions, this unique text provides inspiration and motivation alongside an essential knowledge base.

Engineering educators generally agree that the important insights into theoretical material are gained through the solution of problems - the qualitative portions of the subject are easier understood once the quantitative aspects are mastered. This text adopts this approach by encouraging students to develop problem-solving skills while breaking the 'formula habit' wherein students merely solve problems by plugging in numbers. Instead, worked examples and problems have been selected to develop insight and confidence. Text examples and problems are often recycled, providing alternative solution methods to reinforce comprehension of circuit analysis concepts. In addition, as new examples are presented and solved, the underlying concepts are summarized to ensure and enhance student

understanding.
