ABDI, MOHAMED A: BA WHITTIER COLLEGE, 1966 MPA SYRACUSE UNIVERSITY, 1969 MPH FLORIDA INTERNATIONAL UNIVERSITY, 1996 CONFLICT RESOLUTION AND NATION-BUILDING IN SOMALIA
Publication Scheduled for January 2012
The research concentrated on the current as well as the past quagmire of the Somali conflict. Political, social and economic triggers have been identified to resolve or reduce violent conflict and disorder. The research used primary as well as secondary sources to study the issues and explore the problems inherent in an environment of scarce resources. Confrontations between the state and society were brought to a higher level of violence since the late 1970s following the Somali-Ethiopian war. The author explored avenues for reconciliation and nation-building and introduced several models as possible strategies for nation-building. Conclusively, a home-grown, traditional mechanisms model was recommended

which entails the following policy prescriptions to achieve long-lasting peace and security for Somalia: 1. Governance structures of law and order. 2. Resources: De-escalating conflicts by opening up negotiating opportunities of land and property. 3. Complete demilitarization of society. 4. International cooperation. A plan by the international community to reconstruct and rehabilitate Somalia is essential if we have to avoid a relapse into a chaotic, violent situation in Somalia.

Mediation and Conflict Resolution in Social Work and the Human Services

The second edition of this popular textbook continues to demonstrate the application of theory to nursing practice, presenting a clear strategy for choosing and applying specific theories to specific clinical situations. Each chapter follows a common format: a case is presented, along with several possible theories that might be applied to it. Each theory includes a concise description, with references and recommended readings for those who want more in-depth coverage. Finally one theory is selected for each case and is described in detail, ultimately creating a nursing care plan, with support from the theory. In all, nearly 10 middle-range theories are presented. New to this edition is a selection in each chapter about research supporting the theories discussed. In recognition that a case study format can not encompass all practice circumstances, the final chapter provides the framework for using the strategy in any clinical situation.

Manual of Psychiatric Nursing Care Plans

"Hospital-Based Palliative Medicine: A Practical, Evidence-Based Approach focuses on improving a Hospitalist's ability to provide quality palliative care in the inpatient hospital setting. Although several large textbooks exist for the palliative care provider, there are few detailed resources aimed specifically at the general Hospitalist and hospital-based staff. Existing textbooks dedicate at most only one chapter to palliative care and they lack the detail and specificity in symptom management and communication skills to truly guide care. Hospital-Based Palliative Medicine addresses each of the major components involved in the delivery of inpatient palliative care. These include the management of complex symptoms and the use of specific communication techniques - right down to the actual words to say to the patient - to convey important information such as the reason for and use of medication and how to handle difficult topics with patients and their families and caregivers. The book's authors are all leaders in the field of palliative care, and most of them also practice as hospitalists, and thus understand both perspectives. Chapters are presented in a consistent format with particular attention to both clinical pearls and pitfalls, making the material practical and easily accessible to the busy hospitalist and associated hospital staff"--Provided by publisher.

Leadership Roles and Management Functions in Nursing

Major changes are occurring in the United States population and the nation's health care institutions and delivery systems. Significant disparities in health status exist across population groups. But the health care enterprise, with all its integrated and disparate parts, has been slow to respond. Written by three nationally known scholars and experts, *Diversity and Cultural Competence in Health Care: A Systems Approach* is designed to provide health care students and professionals with a clear understanding of foundations, philosophies, and processes that strengthen diversity management, inclusion, and culturally competent care delivery. Focusing on current practice and health care policy, including the recently passed Patient Protection and Affordable Care Act of 2010 (ACA), this textbook integrates strategic diversity management, self-reflective leadership, and the personal change process with culturally and linguistically appropriate care into a cohesive systems-oriented approach for health care professionals. The essentials of cultural competence and diversity management covered in this text will be helpful to a wide variety of students because they encompass principles and practices that can be realistically incorporated into the ongoing work of any health care field or organization. Each chapter contains learning

objectives, summary, key terms, and review questions and activities designed to allow students to understand and explore concepts and practices identified throughout the text.

A brief clinical situation is followed by questions or commands to describe the solution, based on what was learned in the chapter. Critical Thinking Scenarios at the end of each chapter give readers a short case study to consider and questions to test their application of knowledge. A competency-based format is applied throughout and is based on a research study that identifies clinical management skills needed by beginning staff nurses. Objectives and Key Concepts at the beginning of each chapter provide readers with a glimpse at important information contained within. Key concepts are also shown in boldface upon first mention in that chapter. Cartoons are provided throughout to keep readers more actively interested in the text content.
