Henry Ford's Airport, and Other Aviation Interests 1909-1954

Aerospace Year Book

More than one thousand black-and-white photographs, line drawings, and data tables accompany an authoritative survey of World War II aircraft that reviews the airpower of sixty-eight nations and provides detailed descriptions of each aircraft.

Jane's Pocket Book of Home-built Aircraft

Steel Aircraft Materials and Applications

This is a completely new and revised edition of the General Aviation Handbook, long overdue since it has been over 10 years since the last edition was published. This edition is fully revised and updated and contains 10 years worth of updated material, including the addition of a number of manufacturers and aircraft which were omitted from earlier editions for various reasons. Aircraft new to this edition include the so-called "heavy microlights", which are now an important part of the worldwide light aircraft scene. About 90 percent of the photos are new, and larger page size provides greater space for large data tables and photos. Previous editions have been strong sellers; this is the main reference book on this important sector of the aviation world, and this new edition will be welcomed by both aviation enthusiasts and those involved in the aviation industry.

The year 2003 marks the 100th anniversary of the founding of the Ford Motor Company and the Wright Brothers' first controlled, powered flight at Kitty Hawk, North Carolina. While most people were aware of the Fords' contribution to the automotive industry, most are largely unaware of their contribution to the development of mass production of large airplanes and their impact on commercial and military aviation. This book is written to chronicle the Fords' contribution to the aviation story during a critical period of its development. A period that saw the stick and fabric planes of World War I develop into the all-metal commercial airliner and the mighty bombers of World War II.
