Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Corresponding to the chapters in the main Bonewit text, Study Guide for Today's Medical Assistant, Clinical & Administrative Procedures, 3rd Edition features a variety of practical exercises, activities, checklists, review questions, and more to help users master important medical assisting knowledge and skills. This comprehensive study guide has been thoroughly updated to reflect the 2015 CAAHEP competencies and key areas of practice, such as: electronic medical records, HIPAA regulations, advanced directives, emergency preparedness, ICD-10 coding, billing documentation, medical office technology, medical asepsis, vital signs, pediatric immunizations and injections, colonoscopy procedures, IV therapy, and CLIA waived tests. Consistent, meticulous study guide coverage aligns seamlessly with the main Bonewit text and all other Bonewit solution learning products. Evaluation of Competency checklists assess readers' performance versus stated objectives and performance standards. Critical thinking activities encourage readers to think outside the box and imagine what they would do in real-life situations. Laboratory assignments at the beginning of each chapter give readers a guide on each chapter's procedures, including guidelines on how many practices are required, which study guide pages correlate to the procedure, and which procedures are also in the procedural videos. Key term assessment tests readers'

knowledge of the terms presented in the main text. Evaluation of Learning questions assess readers' progress and are an excellent tool to prepare for the certification exam. Practice for Competency checklists help readers practice each of their clinical skills. Pharmacology math exercises give readers a chance to practice their basic math skills in a way that relates to their future job. Chapter assignment tables at the beginning of each chapter guide readers through the textbook and study guide chapters, and provides a great tracking device for recording progress of textbook reading assignments and study guide activity assignments. NEW! Updated material aligned to most current CAAHEP and ABHES competencies ensures success and employability for today's medical assistants. NEW! Material from the chapter on nutrition is also incorporated into the accompanying study guide material. NEW! Updated content on emergency preparedness and medical records ensure readers are up-to-date on these key topics. NEW! Application to SimChart for the Medical Office where appropriate allows readers to prepare for the real world by working on Elsevier's own educational EHR. NEW! Expanded A&P key terminology sections give readers ample A&P key term practice.

Reinforce your understanding of radiation therapy and prepare for the Registry exam! Mosby's Radiation Therapy Study Guide and Exam Review is both a study companion for Principles and Practice of Radiation Therapy, by Charles Washington and Dennis Leaver, and a superior review for the certification exam offered by the American Registry for Radiologic Technology (ARRT). An easy-to-read format simplifies study by presenting information in concise bullets and tables. Over 1,000 review questions are included. Written by radiation therapy expert Leia Levy, with contributions by other radiation therapy educators and clinicians, this study tool provides everything you need to prepare for the ARRT Radiation Therapy Certification Exam. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Over 1000 multiple-choice questions in Registry format are provided in the text, allowing you to both study and simulate the actual exam experience. Focus questions and key information in tables make it easy to find and remember information for the exam. Review exercises reinforce learning with a variety of question formats to fit different learning styles. Questions are organized by ARRT content categories and are available in study mode with immediate feedback after each question, or in exam mode, which simulates the test-taking experience in a timed environment with ARRT exam-style questions.

The examination and interpretation of tissue sections seen under the light microscope in a laboratory setting is an example of student-directed, independent problem solving. The proper reading of a histologic section is an acquired art that can only be developed through practice, close observation and repetition. This laboratory manual was designed as a guide for students to aid them in this endeavor. The laboratory study guide/manual was designed to be used as a supplement to any current textbook and/or atlas of Histology. Learning objectives provide the overall goals for each chapter. The narrative of the study guide explains how to systematically breakdown, examine and interpret each tissue and/or organ encountered, without regard to a given histologic slide from a specific slide collection. Thus, this systematic method can be used to examine and interpret histologic preparations from any collection or of any species. The student is encouraged to sketch, label and create a personalized atlas while using this laboratory manual as a guide. The vocabulary that should be developed and used during the laboratory can be found quickly by going to the bold face type in the appropriate segment of the text. Each chapter contains one or more tables in which key structures used in the identification of a tissue/organ are presented, offering the briefest possible summary of important histologic features. As a final short review, an appendix provides summary tables that compare and contrasts the basic differences of several structures that are somewhat similar in general architecture.

Among the topics covered in Codebuster's CPT-4 Outpatient Coding Reference and Study Guide are outpatient guidelines, CPT format and conventions, plus terminology. New for 2012 are a new section on Skin Replacement Surgery found in the chapter on the Integumentary System, and significant updates to chapters on the Musculoskeletal, Respiratory, Digestive, and Nervous Systems. This study guide assists HIM professionals prepare for professional coding exams such as the CCS, CCS-P, and CPC exams. The text serves as an excellent resource for coders who need to refresh or expand their CPT-4 coding skills. Coders can look up various diagnoses and procedures for the applicable coding guideline, while having access realistic coding scenarios that are likely to be similar to the coding problems experienced on the job. The book covers the surgery section of CPT-4 and Anesthesiology. Each chapter stands on its own; thus, the reader can go through the chapters in any order. There is a chapter-by-chapter analysis of the various body systems based on the surgery section of the CPT coding book. All chapters contain, in addition to the basic coding guidelines, critical coding questions, coding tips, coding examples, as well as a quiz at the end of each chapter. There is also a section on coding from operative reports. The operative reports are categorized by body system. The book is written in a step-by-step format and is very easy to follow. The content has been chosen to for two purposes: 1. Target the most frequently encountered coding situations in the outpatient setting. 2. Provide the knowledge base to master the outpatient coding concepts tested on the CCS Exam. The text has 236 case scenario short answer questions (CPT codes), 38 operative reports (ICD-9 and CPT codes), and 23 full medical record case studies (ICD-9 and CPT codes). Each question is highly relevant and reflects a coding situation most hospital-based outpatient coders will face. The text strives to ensure the reader understands every diagnosis and procedure discussed: thorough discussion of symptoms, standard treatment protocols, and medications. Coding examples and quizzes help clarify the information presented. 23 Case Studies have been constructed to mimic real-life outpatient medical records. Apply your knowledge from Chapters 1-15 and the Operative Reports to master coding from medical records. Each Case Study presents a complete medical record with associated ancillary documents. The records will test your ability to code in a live setting. Coders can assess their coding efficiency based on their accuracy and speed, critical for on the job practice and exam preparation. The Answer Key contains the rationale for how all codes were determined for the Case Studies. The text is updated every year to reflect the annual CPT coding changes. Linda Kobayashi, BA, RHIT, CCS, has been a coder and coding manager for almost 20 years. Since 1998, Ms. Kobayashi has owned and operated Codebusters, Inc., a nationwide coding consulting company. Widely regarded as a medical coding and auditing expert, she has conducted workshops on a variety of coding topics, including CCS Exam preparation workshops. Throughout her career the author has remained professionally active, as an AHIMA member as well as a member of her state association, CHIA (California Health Information Association). Her formal training includes a teaching credential from California State University Los Angeles, a B.A. degree in English Literature from University of California Los Angeles, an RHIT from AHIMA after completing the RHIT program at East Los Angeles College, and a CCS certificate from AHIMA. Extensive experience as a hands-on coder, auditor and educator, and has given the author the expertise to help coders prepare for the professional coding environment.
