The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

So you want to drive stick You've heard that driving stick gives you more control of your car in every situation, from a passing maneuver to descending a snowy hill. You've heard driving a stick shift car is more economical at the gas pump. You've heard it's more fun. But you've also heard it's hard to learn. There are gearshifts to master, your engine can stall, and understanding the clutch is a nightmare: "Lift the clutch pedal and the clutch is engaged." Engaged? I've never even seen a clutch with a girlfriend! So, what if I told you using a clutch is no more difficult than using a faucet, or that I can teach you - in one sentence - how to avoid ever stalling your engine? I've already taught thousands of people to drive stick - men and women of all ages - normal people, not engineering students or race car engineers. And I can teach you.

Life Passion: Words Inspire Our Desire is an inspiring collection of poetry and short stories offering an alternative view of God and religion. Author Mark Gregory Washer gives a fresh perspective on life and Gods expectations of how we should live a spiritual life. He talks about the difference between right and wrong, both on a personal level along and with a more global approach. Many of the meditations offered in Life Passion are based upon Washers personal life experiences. From the sights and sounds of the romantic city of Odessa to fond memories of his great-grandmother, he envelopes himself in the spirituality of his life stories. Washer also considers the various religious writings and doctrines that bolster his strong religious beliefs. He offers a simpler view into Gods will that makes it more accessible to everyone, and he explores the timeless question so many ask: Why am I here? From Only Words Words can heal Words can hurt Words can make you lose your shirt Words are more Words are less In this deadly game of chess Words will lose Words will win Words will cause your soul to sin Does anyone hear me when I say I cant take another day Does anyone care when I shout Now its time to let me out
