A HazMat team evacuates five square miles of a city business district in response to a chemical spill. Ten city blocks away, a police special response team forms a perimeter around an office building where a terrorist threatens the release of a

deadly chemical agent. Meanwhile, paramedics administer first aid to victims exposed to a possible vesicant. In the real-life world of emergency response, nothing is more crucial to crisis personnel than quick and decisive action. D. Hank Ellison's *Emergency Action for Chemical and Biological Warfare Agents* tells police, paramedics, and firefighters just what actions to take in the event of a crisis involving hazardous materials. The book contains abridged versions of the class indices from Ellison's larger *Handbook of Chemical and Biological Warfare Agents*. The indices deal with classes of agents (nerve, blister, etc.) instead of focusing on specific agents. Each index contains information on the toxicology/health impacts, physical characteristics, hazards from fire or reactivity, protection of personnel, and general first aid for that agent class. Designed to provide rapid access to critical emergency information at the scene of a release of chemical or biological warfare agents, this handy field guide is also ideal for facilitating the coordination with off-site personnel who have access to more comprehensive information in Ellison's larger *Handbook*. It differs from its larger companion, however, in that agent specific data, as well as information on evacuation distances, are listed in table format, making it the ideal tool for emergency responders deployed in the field.

Emergency Response Guidebook

The Framework for a Public Health Emergency Operations Centre (PHEOC framework) document is intended to be used by practitioners of public health; health policy makers; and authorities and agencies responsible for managing emergencies, incidents, or events where the health of populations is at risk. This document provides high-level methodical guidance for designing, developing, and strengthening of public health emergency operations centers. This interim document outlines the key concepts and essential requirements for developing and managing a public health EOC (PHEOC). The overall approach is generic and based on widely acknowledged elements of all-hazards emergency management. It provides an outline for developing and managing a PHEOC to achieve a goal-

oriented response to public health emergencies and unity of effort among response agencies. The document will be revised as necessary. Practical guidance on specific aspects of the PHEOC framework will be developed and published separately. A public health emergency is here defined as an occurrence, or imminent threat, of an illness or health condition that poses a substantial risk of a significant number of human fatalities, injuries or permanent or long-term disability. Public health emergencies can result from a wide range of hazards and complex emergencies. Experience has shown that timely implementation of an EOC provides an essential platform for the effective management of public health emergencies. Public health emergencies involve increased incidence of illness, injury and/or death and require special measures to address increased morbidity, mortality and interruption of essential health services. For such emergencies, a multi-agency, multi-jurisdictional response is often required, working with the national disaster management organization. When normal resources and capacities are exceeded, support from outside the affected areas will also be required. External assistance could include national, cross-border, regional or international resources.

"This document presents the key issues to be considered in the process of setting up and implementing public health alert, response and operational plans for MGs. It sets out methods for assessing the needs of the MG, determining the ability of existing systems to meet those needs, and modifying and strengthening those systems where required. It provides advice about prevention, detection and management of public health incidents, as well as the integration of the full range of public health activities into the MG planning process. It addresses the many different types of MG, provides case studies of the work undertaken for public health activities at various MGs, and supporting papers and additional resources to support the information here. This document has been developed primarily for public health professionals, as well as key policy makers, planners and executive personnel. In addition to those in the health sector, there are many outside authorities involved in contributing to healthy outcomes at MGs, who will also find this document useful. It is further anticipated that it will be a valuable resource for event promoters and managers, emergency service personnel, government bodies, and any organizations or individuals who contribute to the organization of MGs.

Wide distribution should be encouraged, providing it is understood that while many factors influence the wellbeing of those attending MGs, the detailed contents of this document are directed principally at managing public health issues that influence health and safety at a MG."--Page 10-11.
