Written by and for nurse practitioners, this practical textbook focuses on what primary care providers need to learn and practice drug therapy. With an overall emphasis on patient teaching and health promotion, you will learn how to provide effective patient teaching about medications and how to gain patient compliance. Drug coverage focuses on “key drugs rather than “prototype drugs, so you can find important information about the most commonly used drugs rather than the first drug in each class. You will also find discussions on the legal and professional issues unique to nurse practitioners and other primary care providers. The 3rd edition also features an expanded emphasis on established clinical practice guidelines and evidence-based practice, plus two new chapters that cover drugs for ADHD and drugs for dementia. **UNIQUE!** Written specifically for nurse practitioners with an overall emphasis on patient teaching and health promotion. **UNIQUE!** Covers specific topics such as prescriptive authority, role implementation, and writing prescriptions. Presents comprehensive coverage of the drugs most commonly prescribed in – and the issues most relevant to – primary care practice.

UNIQUE! Identifies the Top 200 drugs in chapter openers with a special icon and covers them in-depth to familiarize you with the most important, need-to-know drug information. Uses a consistent heading scheme for each prototype drug discussion to make it easier to learn and understand key concepts. Includes an introductory chapter on “Design and Implementation of Patient Education that highlights content on patient teaching and compliance. Includes specific “Patient Education sections in each drug chapter. Provides extensive coverage of drug therapy for special populations to alert you to special considerations based on age, pregnancy, race and other factors. A separate chapter on “Complementary and Alternative Therapies discusses the available complementary and alternative modalities, including detailed information on actions, uses, and interactions of commonly used herbs. Drug Overview tables at the beginning of each chapter outline the classifications of drugs discussed and provide a handy reference of drug classes and subclasses, generic names, and trade names. Clinical Alerts highlight essential information that primary care providers must remember in order to avoid serious problems, including cautions for prescribing, information about drug interactions, or warnings about particularly ominous adverse effects. An entire unit covers drugs for health promotion to introduce you to drugs commonly seen in outpatient primary care settings and to prepare you for practice in a society increasingly focused on health promotion and disease prevention. Includes separate chapters on Immunizations and Biologicals, Weight Management, Smoking Cessation, Vitamins and Minerals, Over-the-Counter Medications, and

Complementary and Alternative Therapies.

This book provides a comprehensive resource on the pathology of the human singleton placenta. Agreed nomenclature, nosology, definitions and, where possible, thresholds for meaningful clinical corrections for lesions ideal for practical application in clinical practice are presented. Evidence is also featured on relevant potential clinical correlations to aid the reader in deciding upon the most appropriate management strategy. Areas of current uncertainty are also covered for potential future research. Pathology of the Placenta systematically describes placental pathology, and represents a valuable resource for practising and trainee pathologists, obstetricians, neonatologists and epidemiologists.

Long recognized as the authoritative leader in the field, Creasy and Resnik's Maternal-Fetal Medicine, 8th Edition, continues to provide the latest evidence-

based guidelines for obstetric and neonatal management, helping you minimize complications and offer patients the best possible care. Written by renowned experts in obstetrics, gynecology, and perinatology, this comprehensive resource has been thoroughly updated and reflects new information in every area, including recent tremendous advances in genetics, imaging, and more. Focuses on complicated obstetric issues, highlighting the most commonly encountered anomalies and providing clear guidelines for obstetric and neonatal management. Offers comprehensive updates on rapidly changing topics, including a completely revised section on genetics and genetic technology for prenatal diagnoses, as well as an expanded imaging section on abdominal, urogenital, and skeletal imaging. Includes four new chapters: Molecular Genetic Technology, MRI in Obstetrical Imaging, Obesity in Pregnancy, and Pregnancy as a Window to Future Health. Features numerous flow charts for quick access to diagnosis and treatment protocols and to clarify complex material. Presents the knowledge and expertise of new editors Dr. Joshua Copel, an expert in the field of fetal therapy who has pioneered new diagnostic techniques for unborn patients and their mothers, and Dr. Robert Silver, a leader in the maternal-fetal medicine community.

This revised second edition of *Ethics and the Profession of Anthropology* renews the challenge to anthropologists to engage in a dialogue concerning their commitment to professional ethical conduct. Containing a majority of new chapters, the authors redefine what it means to conduct anthropological research ethically in a discipline that is now less isolated from allied fields in the physical and behavioral sciences and coming to terms with the global changes that affect its practice. Fluehr-Lobban provides an overview of issues from the past 110 years, drawing attention to the need for maintaining the ethical core of the discipline and a code of professional responsibility. The contributors describe a series of crises in the discipline involving clandestine research and other questionable actions by anthropologists, including secret research and intelligence work by academics; the ethical problems of medical work among native people; the evolution of cyber-ethics; and the changing relationships between indigenous people, archaeologists

and museums as a result of the 1990 NAGPRA repatriation legislation. The book offers an excellent model for integrating ethics education at all levels of instruction and for empowering and engaging communities. It will be a valuable tool for anthropological researchers, instructors and fieldworkers as they transform their professional practice.
