Annual Report

Kenneth R. Westphal presents an original interpretation of Hume's and Kant's moral philosophies, the differences between which are prominent in current philosophical accounts. Westphal argues that focussing on these differences, however, occludes a decisive, shared achievement: a distinctive constructivist method to identify basic moral principles and to justify their strict objectivity, without invoking moral realism nor moral anti-realism or irrealism. Their constructivism is based on Hume's key insight that 'though the laws of justice are artificial, they are not arbitrary'. Arbitrariness in basic moral principles is avoided by starting with fundamental problems of social coördination which concern outward behaviour and physiological needs; basic principles of justice are artificial because solving those problems does not require appeal to moral realism (nor to moral anti-realism). Instead, moral cognitivism is preserved by identifying sufficient justifying reasons, which can be addressed to all parties, for the minimum sufficient legitimate principles and institutions required to provide and protect basic forms of social coördination (including verbal behaviour). Hume first develops this kind of constructivism for basic property rights and for government. Kant greatly refines Hume's construction of justice within his 'metaphysical principles of justice', whilst preserving the core model of Hume's innovative constructivism. Hume's and Kant's constructivism avoids the conventionalist and relativist tendencies latent if not explicit in

contemporary forms of moral constructivism.

Modern approaches to Roman imperialism have often characterized Romanization as a benign or neutral process of cultural exchange between Roman and non-Roman, conqueror and conquered. Although supported by certain types of literary and archaeological evidence, this characterization is not reflected in the visual imagery of the Roman ruling elite. In official imperial art, Roman children are most often shown in depictions of peaceful public gatherings before the emperor, whereas non-Roman children appear only in scenes of submission, triumph, or violent military activity. Images of children, those images most fraught with potential in Roman art, underscore the contrast between Roman and non-Roman and as a group present a narrative of Roman identity. As Jeannine Diddle Uzzi argues in this 2005 study, the stark contrast between images of Roman and non-Roman children conveys the ruling elite's notions of what it meant to be Roman.

Understanding Housing Finance

Have you ever wondered how to grow your own rainforest trees? Is there a beautiful tree that you have always wanted to collect and propagate the seed from? Are you in the business of ecological restoration, rainforest propagation or environmental education? This long-awaited guide to rainforest seed

propagation unlocks the secrets to growing 300 rainforest species. Providing specific information on how to sustainably collect, process and germinate seeds, this user-friendly book aims to support a growing movement of rainforest restoration. With invaluable information based on 30 years of research in northern New South Wales, users will find even difficult rainforest species delightfully easy to grow. Seeing a seed germinate, caring for the seedling and eventually planting the tree is deeply satisfying. And, in this time of widespread deforestation, millions of trees are needed for restoration and every tree counts. Whether you are growing one or one hundred thousand, why not start today?

Combines academic theory with practical industry experience Updated to include the latest regulations and references Covers hazard identification, risk assessment, and inherent safety Case studies and problem sets enhance learning Long-awaited revision of the industry best seller. This fully revised second edition of Chemical Process Safety: Fundamentals with Applications combines rigorous academic

methods with real-life industrial experience to create a unique resource for students and professionals alike. The primary focus on technical fundamentals of chemical process safety provides a solid groundwork for understanding, with full coverage of both prevention and mitigation measures. Subjects include: Toxicology and industrial hygiene Vapor and liquid releases and dispersion modeling Flammability characterization Relief and explosion venting In addition to an overview of government regulations, the book introduces the resources of the AIChE Center for Chemical Process Safety library. Guidelines are offered for hazard identification and risk assessment. The book concludes with case histories drawn directly from the authors' experience in the field. A perfect reference for industry professionals, *Chemical Process Safety: Fundamentals with Applications, Second Edition* is also ideal for teaching at the graduate and senior undergraduate levels. Each chapter includes 30 problems, and a solutions manual is now available for instructors.

Using the post 9/11 period as its backdrop, the book examines questions concerning the limits of government intrusion on protected Fourth Amendment rights. From the introduction of the U.S.A. PATRIOT Act and amendments to the Foreign Intelligence Surveillance Act (FISA) to the Terrorist Surveillance Program, the author develops and applies a normative ethical framework based on a legal proportionality test that can be applied to future cases involving U.S. foreign intelligence surveillance.

Living Wild: Beavers

The engineering skills of beavers, the showy plumage of flamingos, and the defining characteristics of six other fascinating animals are explored in the newest titles in the Living Wild series. Vivid photographs help take readers on a virtual field study to observe the life cycle and behaviors of each featured mammal, bird, and amphibian. Each book also looks at past and present scientific research and includes a unique storytelling element in the form of an animal tale drawn from mythology or folklore. Progressively complex text draws readers into this mainstay life science series, incorporating social studies, history,

fine arts and pop culture. In this title take a scientific look at beavers, including their habitats, physical characteristics such as their gnawing teeth, behaviors, relationships with humans, and abundance of the rodents in the world today.

The JF/J2F "Duck" was one of those military workhorses moving around in the background before and during WWII which did a tremendous job but never got the publicity of its' more glamorous teammates. Some said the Duck could be more aptly named the "Ugly Duckling." Be that as it may; when no other bomber could be found, it carried bombs; when no other transport could be found, it transported; when no other photo plane could be found, it photographed and when no other rescuer could be found, it rescued. When it came to "Utility Craft," the JF/J2F was the definitive.

Alec Chisholm inspired Australians to see nature anew. His *Mateship with Birds*, published in 1922, is a classic of nature writing, and until his death in 1977 he urged his compatriots to cherish the natural world as their national heritage. Chisholm was a pioneer conservationist, a leading ornithologist, and much else besides. He earned renown - and some controversy - as a journalist, biographer, historian and encyclopaedia editor. *Idling in Green Places* is the first

full biography of this intriguing and influential Australian.

Since CAFE standards were established 25 years ago, there have been significant changes in motor vehicle technology, globalization of the industry, the mix and characteristics of vehicle sales, production capacity, and other factors. This volume evaluates the implications of these changes as well as changes anticipated in the next few years, on the need for CAFE, as well as the stringency and/or structure of the CAFE program in future years.

Fuel Economy of the Gasoline Engine

This text provides a basic treatment of modern electric machine analysis that gives readers the necessary background for comprehending the traditional applications and operating characteristics of electric machines—as well as their emerging applications in modern power systems and electric drives, such as those used in hybrid and electric vehicles. Through the appropriate use of reference frame theory, *Electromagnetic Motion Devices, Second Edition* introduces readers to field-oriented control of induction machines, constant-torque, and constant-power control of dc, permanent-magnet machines,

and brushless dc machines. It also discusses steady-state and transient performance in addition to their applications. Electromagnetic Motion Devices, Second Edition presents: The derivations of all machine models, starting with a common first-principle approach (based upon Ohm's, Faraday's, Ampere's, and Newton's/Euler's laws) A generalized two-phase approach to reference frame theory that can be applied to the ac machines featured in the book The influences of the current and voltage constraints in the torque-versus-speed profile of electric machines operated with an electric drive Complete with slides, videos, animations, problems & solutions Thoroughly classroom tested and complete with a supplementary solutions manual and video library, Electromagnetic Motion Devices, Second Edition is an invaluable book for anyone interested in modern machine theory and applications. Plug-in electric vehicles are coming. Major automakers plan to commercialize their first models soon, while Israel and Denmark have ambitious plans to electrify large portions of their vehicle fleets. No technology has greater potential to end the United States' crippling dependence on oil, which leaves the nation vulnerable to price shocks, supply disruptions, environmental degradation, and national security threats including terrorism. What does the future hold

for this critical technology, and what should the U.S. government do to promote it? Hybrid vehicles now number more than one million on America's roads, and they are in high demand from consumers. The next major technological step is the plug-in electric vehicle. It combines an internal combustion engine and electric motor, just as hybrids do. But unlike their precursors, PEVs can be recharged from standard electric outlets, meaning the vehicles would no longer be dependent on oil. Widespread growth in the use of PEVs would dramatically reduce oil dependence, cut driving costs and reduce pollution from vehicles. National security would be enhanced, as reduced oil dependence decreases the leverage and resources of petroleum exporters. Brookings fellow David Sandalow heads up an authoritative team of experts including former government officials, private-sector analysts, academic experts, and nongovernmental advocates. Together they explain the current landscape for PEVs: the technology, the economics, and the implications for national security and the environment. They examine how the national interest could be served by federal promotion and investment in PEVs. For example, can tax or procurement policy advance the cause of PEVs? Should the public sector contribute to greater research and development? Should the government insist on PEVs to replenish its huge fleet of official vehicles? Plug-in electric vehicles are coming. But how soon, in what numbers, and to what effect? Federal policies in the years ahead will go a long way toward answering those questions. David Sandalow and his colleagues examine what could be done in that regard, as well as what should be done.

The keyboard accompaniments are well within the grasp of pianists of moderate ability and high-quality audio tracks are included of complete performances as well as backing tracks.

The European Championship - A Complete History

SynopsisSawdust and Steam records the history of the Flaxton Sawmill from its establishment in 1936 to its demise in 1963. The author, Gordon Plowman, is the son of Ray Plowman who built the mill in partnership with Horrie Hingston. Because of this family tie, he is able to personalize this 27- year history in a way that will capture the interest of the general reader.The book covers the history of the mill

from Case Mill to Hardwood Mill and from steam power to electric power through a change of ownership. It describes the technical changes in the operation of the mill in a language lay people can understand. As well it also covers the development of the timber industry on the central Blackall Range from axe and cross-cut saw to chain saw. The author carefully creates a broader, historical context for this story. He highlights the impact of World War 1, the Great Depression and World War 2 on the small rural community of Flaxton. He deals sensitively with the struggles against poverty and isolation that built a resilient community that responded with mateship and humour in overcoming these challenges. He also records some of the more interesting national and international contracts the mill won and filled. Through this history the reader will meet some of the characters of the timber industry and the early Flaxton Community through local eyes and hear their tales through local ears. This is Social History at its best.

This book is a guide to Perl's most common Win32 extensions, grouped by their functionality. The new edition updates coverage from Perl 5.05 to current Perl version 5.6. It also includes new chapters offering critical, badly-needed information regarding security for Win32Perl, the topic most highly requested by reviewers. The appendices have descriptions and syntax of each function in the extensions covered.

Each chapter makes extensive use of code segments to illustrate the use of specific functions and real world scenarios in which these functions can be used.

Cold and Ultracold Collisions in Quantum Microscopic and Mesoscopic Systems

The sport of competitive kart racing is considered by many to be the most fundamental and exciting branch of motorsports available worldwide.

Performance karts are lightweight, agile, and provide the thrill of racing competition at an accessible level for thousands of participants across the globe each year. Written by national and regional karting champion Eric Gunderson, "Karting 101" serves to educate the complete new-comer about the sport, and provides them the information necessary to begin their first foray into karting. From the basics of kart chassis dynamics to karting safety gear, "Karting 101" covers karting in a comprehensive yet accessible format.

Taken for a Ride

The book follows the two children as they embark on an adventure, which begins with the discovery of a hidden witch's haven in a graveyard and Jordan's first encounter with the spirit world - but by know means

the first for Sebastian. Then a haunted observatory on the outskirts of town yields a clue - a piece of an intriguing map leading to, what they believe to be, hidden treasure. After collecting the rest of the clues from around the town, Jordan and Sebastian search for the treasure, but instead of rubies, emeralds and gold doubloons, they find themselves lead to a doorway into another world, called the Phantom Realm.

The Burning Fiery Furnace

There's nae power on earth can crush the men who can sing on a day like this. A powerful re-imagining of Joe Corrie's neglected classic about a Fife mining community during the General Strike. To raise funds for the soup kitchens feeding the miners and their starving families, Corrie wrote *In Time O' Strife* in 1926 whilst on strike himself, exposing the brutal lives of a family staring hunger and defeat in the face. Some 87 years later, Graham McLaren has adapted, designed and directed this rarely performed classic play. Created by Graham McLaren (*Men Should Weep*, *A Christmas Carol*), the production uses fragments of Corrie's other plays, poems and songs, celebrating his ability as a writer and his contribution to Scottish culture. This edition pairs Corrie's original text with the script created by McLaren's adaptation process.

Cold and ultracold collisions occupy a strategic position at the intersection of several powerful themes of current research in chemical physics, in atomic, molecular and optical physics, and even in condensed matter. The nature of these collisions has important consequences for optical manipulation of inelastic and reactive processes, precision measurement of molecular and atomic properties, matter-wave coherences and quantum-statistical condensates of dilute, weakly interacting atoms. This crucial position explains the wide interest and explosive growth of the field since its inception in 1987. The author reviews elements of the quantum theory of scattering theory, collisions taking place in the presence of one or more light fields, and collisions in the dark, below the photon recoil limit imposed by the presence of any light field. Finally, it reviews the essential properties of these mesoscopic quantum systems and describes the key importance of the scattering length to condensate stability.

Balancing Liberty and Security

Leeza, in her forties, married with two children finds

herself separated from her husband, unexpectedly. With her whole life turned upside down, Leeza takes us back through the tumultuous story of her life, reflecting on how she lived for men. Starting from her father, to her first love, a violent relationship, an overseas affair, falling in love with her husband, and having children, Leeza bares her soul with brutal honesty about her quest for love. Leeza writing is poetic and pacey, touching on topics and themes that need to be voiced in contemporary women's literature. Her story is told through wit, humour and self-deprecation as she courageously shares what it's like to be a woman today navigating the wobbliness of life.

Eidolon

A politically polarized America is coming together over a new kind of car—the plug-in hybrid that will save drivers money, reduce pollution, and increase US security by reducing dependence on imported oil. Plug-in Hybrids points out that, where hydrogen fuel-cell cars won't be ready for decades, the technology for plug-in hybrids exists today. Unlike conventional hybrid cars that can't run without gasoline, plug-in hybrids use gasoline or cheaper, cleaner, domestic

electricity—or both. Although plug-in hybrids are not yet for sale, demand for them is widespread, coming from characters across the political spectrum, such as:

- Chelsea Sexton, the automotive insider: working for General Motors, Sexton fought attempts to destroy the all-electric EV1 car and describes how car companies are resisting plug-in hybrids—and why they'll make them -anyway.
- Felix Kramer and the tech squad: Kramer started a nonprofit organization using the Internet to tap into a small army of engineers who built the first plug-in Prius hybrids.
- R. James Woolsey, former CIA director and national security hawk: seeing the end of oil supplies looming, Woolsey is demanding plug-in hybrids to wean us from petroleum. Cautioning that the oil and auto companies know how to undermine the success of plug-in car programs to protect their interests, the book gives readers tools to ensure that plug-in hybrids get to market—and stay here.

Death Traps to Treasure

The book provides the essential features necessary to understand and apply the mathematical-mechanical characteristics and tools for vehicle dynamics including control mechanism. An introduction to passenger car modeling of different complexities provides the basics for the dynamical behavior and presents vehicle models later used for the application of control strategies. The presented modeling of the tire behavior, also for transient changes of the contact patch properties, shows the necessary mathematical descriptions used for the simulation of the vehicle

dynamics. The introduction to control for cars and its extension to complex applications using e.g. observers and state estimators is a main part of the book. Finally the formulation of proper multibody codes for the simulation leads to the integration of all parts. Examples of simulations and corresponding test verifications show the profit of such a theoretical support for the investigation of the dynamics of passenger cars.
