Financial Services Fact Book

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and

respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

a full-color format with 1,300 new references. Content updates keep pace with industry trends, including deeper discussions of legal liability, risk management and equipment management, servant leadership, sport culture, and social media. Particularly valuable are the special elements and practical applications that offer students real opportunities to develop their skills: Features such as Reviewing Their Game Plan and Sport Management Professionals @ Work (new to this edition) provide a cohesive thread to keep students focused on how sport managers use the concepts on the job. Applying the Concept and Time-Out sidebars offer opportunities for critical thinking by having the student think about how specific concepts relate to a sport situation or to the student's actual experiences in sports, including part-time jobs, full-time jobs, internships, and volunteer work. Self-Assessment exercises offer insight into students' strengths and weaknesses and how to address shortcomings. An enhanced web study guide is integrated with the text to facilitate a more interactive setting with which to complete many of the learning activities. Several of the exercises require students to visit a sport organization and answer questions to gain a better understanding of sport management. Skill-Builder Exercises present a variety of scenarios and provide step-by-step guidance on handling day-to-day situations such as setting priorities, conducting job interviews, handling conflict, and coaching employees to better performance. Sports and Social Media Exercises offer Internet-based activities that expose students to the role of social media in managing a sport organization. Students are required to use popular social media sites such as Facebook, Twitter,

and LinkedIn and visit sport websites. Game Plan for Starting a Sport Business cases put students in the driver's seat and ask them to perform managerial activities such as developing an organization structure and formulating ideas on how to lead their employees. The web study guide allows students to complete most of the learning activities online or download them and then submit them to the instructor. Applied Sport Management Skills, Third Edition, is a critical resource that provides students with a thorough understanding of the management principles used in sport organizations while also helping students developing their practical skills. International, Author of *Can't Not Do: The Compelling Social Drive that Changes Our World*. Named one of the "Top 50 Most Influential People in the Nonprofit Sector" by *The NonProfit Times*, and "Philanthropist of the Year" by *Future in Review*.

The opioid crisis is not an anomaly. Instead, it's a self-inflicted wound, driven by a catastrophically dysfunctional health care system, leading to what has become the largest public health crisis in 100 years. Fortunately, proven antidotes exist -- all created and spearheaded by forward-looking citizen leaders and employers. It's time to scale these solutions nationwide, stop the crisis in its tracks and move us light years closer to solving the larger disaster that is our health care system. As you read this, countless people are leaving clinics and hospitals with over 30-day supplies of opioids for lower back pain, and other diagnoses for which opioids have little evidence of helping. Further, people are receiving opioid prescriptions for procedures where evidence-based medicine doesn't justify such as many spinal procedures and asymptomatic wisdom tooth removal. We need to mobilize the resources necessary to help those already enslaved by opioid use disorders. At the same time, we also need to turn off the enormous flow of people becoming addicted. Only by traveling upstream to stop addiction before it starts will we ever clean up the opioid crisis--and prevent future floods of addiction. In *The Opioid Crisis Wake-Up Call*, Dave Chase explores the already-existing solutions to the largest public health crisis in a 100 years, updating and expanding on the content and themes from his 2017 bestseller, *The CEO's Guide to Restoring the American*

Dream. Here he uncovers the upstream fixes designed to stop the crisis at its source. Chase's message is this: resolving the opioid crisis, at the CEO, citizen, and community level, brings us miles closer to fixing the systemic failures of U.S. health care.

In 2010, an estimated 50 million people were uninsured in the United States. A portion of the uninsured reflects unemployment rates; however, this rate is primarily a reflection of the fact that when most health plans meet an individual's needs, most times, those health plans are not affordable. Research shows that people without health insurance are more likely to experience financial burdens associated with the utilization of health care services. But even among the insured, underinsurance has emerged as a barrier to care. The Patient Protection and Affordable Care Act (ACA) has made the most comprehensive changes to the provision of health insurance since the development of Medicare and Medicaid by requiring all Americans to have health insurance by 2016. An estimated 30 million individuals who would otherwise be uninsured are expected to obtain insurance through the private health insurance market or state expansion of Medicaid programs. The success of the ACA depends on the design of the essential health benefits (EHB) package and its affordability. Essential Health Benefits recommends a process for defining, monitoring, and updating the EHB package. The book is of value to Assistant Secretary for Planning and Evaluation (ASPE) and other U.S. Department of Health and Human Services agencies, state insurance agencies, Congress, state governors, health care providers, and consumer advocates.

"When a story captures the imagination of millions, that's magic. Can you qualify magic? Archer and Jockers just may have done so."—Sylvia Day, New York Times bestselling author

Ask most people about massive success in the world of fiction, and you'll typically hear that it's a game of hazy crystal balls. The sales figures of E. L. James or Dan Brown seem to be freakish—random occurrences in an unknowable market. But what if there were an algorithm that could reveal a secret DNA of bestsellers, regardless of their genre? What if it knew, just from analyzing the words alone, not just why genre writers like John Grisham and Danielle Steel belong on the lists, but also that authors such as Junot Diaz, Jodi Picoult, and Donna Tartt had telltale signs of success all over their pages? Thanks to Jodie Archer and Matthew Jockers, the algorithm exists, the code has been cracked, and the results bring fresh new insights into how fiction works and why we read. The Bestseller Code offers a new theory for why *Fifty Shades of Grey* sold so well. It sheds light on the current craze for dark heroines. It reveals which themes tend to sell best. And all with fascinating supporting data taken from a five-year study of twenty thousand novels. Then there is the hunt for "the one"—the paradigmatic example of bestselling writing according to a computer's analysis of thousands of points of data. The result is surprising, a bit ironic, and delightfully unorthodox. This book explains groundbreaking text-mining research in accessible terms and offers a new perspective on the New York Times bestseller list. It's a big-idea book
