To celebrate Apple's twentieth anniversary, AppleDesign provides a rare inside look at the

Industrial Design Group, examining the role this small team of creative individuals has played in the rise of Apple from a Silicon Valley garage to a billion-dollar corporation. It details the formation of the Group, outlines their method for turning great ideas into even greater products, reveals many design concepts and products that never reached the marketplace, and offers a glimpse at the triumph and turmoil that results when creative desire meets (and occasionally collides with) corporate reality. With more than 400 color illustrations and detailed discussion of more than 100 products, design concepts and works-in-progress, AppleDesign provides the most thorough examination of a corporate design group ever published. From the Macintosh to the PowerBook, the Newton MessagePad, the eMate and the just-released Twentieth Anniversary Macintosh, Apple's designers have given us some of the most compelling and enduring products of our time. Their work not only enriches the lives of more than 50 million Apple users worldwide, it influences the computer industry at large, providing strong evidence for those who argue that industrial design is as powerful and relevant an art form as painting, sculpture or architecture.

Batgirl Annual (2011-) #2

This book offers the first detailed intellectual history of communication study, from its beginnings in late nineteenth-century critiques of corporate capitalism and the burgeoning American wireline communications industry, to contemporary information theory and poststructuralist accounts of communicative activity. Schiller identifies a problematic split between manual and intellectual labor that outlasts each of the field's major conceptual departures, and from this vital perspective builds a rigorous critical survey of work aiming to

understand the nexus of media, ideology, and information in a society. Looking closely at the thought of John Dewey, C. Wright Mills, Raymond Williams, Stuart Hall, Daniel Bell, and others, Schiller carefully maps the transformation of ideas about communication and culture as issues of corporate power, mass persuasion, cultural imperialism, and information expansion succeed one another in prominence. Bringing his analysis of communication theory into the present, Schiller concludes by limning a unitary model of society's cultural/informational production, one that broadens the concept of "labor" to include all forms of human self-activity. Powerful, challenging, and original, *Theorizing Communication: A History* offers a brilliantly constructed overview of the history of communication study, and will interest scholars working in the field as well as those working in critical theory, cultural studies, and twentieth-century intellectual history.

Essentials of Business Research

"Chen focuses on the effects of age structure changes on the size of budget deficits of national governments. More specifically, he determines whether differences in age structure can account for the observed differences in budget deficits across countries as well as across time. By way of an extension of the untested theory of negative bequest motives advocated by Cukierman and Meltzer (1989), the author argues that the commonly accepted notion that population aging tends to increase the budget deficits of economies is theoretically consistent. However, preliminary results from country and time fixed-effects panel regressions, estimated from 1975 to 1992 over 55 industrial and developing countries, indicate statistical evidence for this postulation is present only in the developing countries but not in the industrial countries. This paper--a product of the Knowledge for Development Program, World Bank Institute--is part of a larger effort in the institute to study the economic and social effects of population aging"--World Bank web site.
