A Trooper Galahad

The Organic Chem Lab Survival Manual

At last, a book that, with honesty and humor, reveals the consultant's hidden playbook. A top-level consultant who came back in from the cold to become a corporate executive with one of the top U.S. banks, Romaine chronicles the behind-the-scenes deal making among executives, consultants, and third-party outsourcers that typifies all too many of today's corporations. . . . Romaine also presents sound recommendations that can help responsible managers and consultants survive and win. - M. A. Turin, Former IBM Group Director for International Technical Support, Vice President of Gartner Group, President of Turin

Associates. . . intriguing and very relevant, particularly in light of Enron. - Ralph Nader
Even if you're not in business, it's an interesting story, and worth the read. - Foreword
Finally, the real story about corporate America with its increased reliance on consultants. Since the 1990s, consulting solutions have become the de facto standard for solving business problems and providing cover for corporate decision makers. This is not the typical CEO whitewash, or business management primer. Steve Romaine offers a view never before shared with management or stockholders as he takes a hired gun's journey beginning at the outside looking in, and ending at the pinnacle of a corporation's power. Based on his experience of working for IBM, his later role as a self-employed consultant, and finally his responsibilities as senior vice president for NationsBank, Romaine makes it clear that the issues leading to the collapse of Enron were not isolated events. Soldier of Fortune 500 explores corporate cronyism between executives and their consultants, and builds a convincing case of how, without the proper safeguards, such cozy relationships can lead to pervasive problems, placing stockholders, employees, and the future viability of the American corporation at risk. This book is a must read for corporate managers, employees, and anyone involved with the consulting business. Steve Romaine (Fairfield, CT), now an independent consultant, has held high-level consulting and managerial positions with KPMG Consulting, The Monitor Company, NationsBank, Informed Technology Decisions, and IBM.

Who's Who in the World 1995

Written for the laboratory that accompanies the sophomore/junior level courses in Organic Chemistry, Zubrick provides students with a valuable guide to the basic techniques of the Organic Chemistry lab. The book will help students understand and practice good lab safety. It will also help students become familiar with basic instrumentation, techniques and apparatus and help them master the latest techniques such as interpretation of infrared spectroscopy. The guide is mostly macroscale in its orientation.

Senior High School Library Catalog

Includes authors, titles, subjects.

Who's who in California

This single volume affords instant access to more than 35,000 individual biographies of the people whose activities are shaping today's world. Among those profiled are prominent government figures, high-ranking military officers, leaders of the largest corporations in each country, heads of religious organizations, pioneers in science & the arts & many more.

Books in Print 1993-94

Kings Chem Guide is a general chemistry book designed to teach the reader about the basic fundamentals of chemistry including general chemical reactions. The book is divided into 8 chapters and includes Introduction to chemistry, Familiarization with Laboratory Techniques, Chemical mixtures, Extraction Procedures and processes, General Lab Procedures, Advanced laboratory procedures, Electrochemical processes in general chemistry Utilizing 'Open Cells', and Electrochemical processes, Electro chemical methods in general chemistry Utilizing 'divided Cells'. The book includes over 60 detailed laboratory procedures designed to teach the reader the basics of chemistry and why chemistry happens.

Grassland-Invertebrate Interactions: Plant Productivity, Resilience and Community Dynamics

Involuntary Kings

Each vol. is divided into 2 parts 1st-7th ed.: Dictionary catalog and Classified catalog; 8th-9th ed. have 3rd. part: Directory of publishers.

Book Publishers Directory

Natural and anthropogenic grasslands such as prairies, meadows, rangelands, and pastures cover more than 40% of the planet's surface and provide a wealth of ecological services. Grasslands alone store one third of the global carbon stocks and grass roots, through their specific architectures, ensure water cycling and prevent the erosion of fertile topsoil. In addition, grasslands are of vital importance for human food production as vast areas of rangelands and pastures provide feed for livestock. Pastoral legumes mobilize atmospheric nitrogen and improve fertility of arable soils. Not least, grasslands are an essential genetic resource. The three major crop species that feed half of the global population have been bred from wild grasses. Ancestors of our contemporary turf cultivars, common components of

urban landscapes and recreation spaces, originated from wild grasslands. Although natural and managed grasslands represent pivotal ecosystems, many aspects of how they function are poorly understood. To date, most attention has focused on grassland primary producers (i.e. forage plants) and mammalian grazers but invertebrates are likely to play an equally, if not more important role in grassland ecosystem functioning. In Australian pastures, for example, the biomass of root-feeding scarab beetles can often exceed that of sheep and plant damage caused by invertebrates is sometimes equivalent to an average dairy cow's grass consumption. Indeed, grasslands are one of the most densely populated ecosystems with invertebrates being probably the most important engineers that shape both plant communities and the grassland as a whole. In a rapidly changing world with increasing anthropogenic pressure on grasslands, this Research Topic focuses on: 1. How grassland habitats shape invertebrate biodiversity 2. Impacts of climate change on grassland-invertebrate interactions 3. Plant and invertebrate pest monitoring and management 4. Plant-mediated multitrophic interactions and biological control in grasslands 5. Land use and grassland invertebrates 6. Plant resistance to invertebrate pests Given the increasing demand for food and land for human habitation, unprecedented threats to grasslands are anticipated. Resilient to some extent, these key ecosystems need to be better comprehended to guarantee their sustainable management and ecosystem services.

Two men named Merrick Delmar, separated by more than one thousand years. One was the very first King of Isola di Squalo, and the other will be the next. Their lives are so different, yet they are very much the same. Each struggles with the position of authority into which he has been thrust. Neither feels qualified, and neither knows where to go for help. What does it take to be a good King? Can one man do it alone? Through struggle and storm, each will make a journey of self-discovery to assess whether he truly can rule, involuntarily or not. Sometimes, the calm in the eye of the storm must come from within.
