Motors use more than half of all electricity. This book outlines an approach for increasing motor and motor system efficiency through high-efficiency motors, optimized controls, improved component sizing and repair, better transmission hardware, and more comprehensive monitoring and maintenance. In addition to explaining technical opportunities in language understandable to non-engineers, the book reviews what is known about the existing motor stock and its use, chronicles experience to date with drive power programs and policies, and offers recommendations for future efforts. Full application of the measures described can cut U.S. electricity demand by up to 20 percent, save motor users and utilities billions of dollars, reduce pollutant emissions, and enhance productivity. The book was written by an interdisciplinary team of engineers, energy analysts, and program planners who collectively have over 50 years of experience in the energy efficiency field.

For more than four decades after the end of World War II in 1945, the security interests of the United States focused on tensions with the Soviet Union. The contest, which became known in 1948 as the Cold War, pitted two fundamentally opposed ideologies and political systems against one another across the so-called Iron Curtain in Europe. As tensions between the United States and the Soviet Union mounted, the United States increased its overseas military presence. The North Atlantic Treaty Organization (NATO), established in 1949, created an alliance led by the United States for the mutual defense of Western Europe. NATO embodied the two foreign policy cornerstones of the United States—deterrence and containment of Soviet expansion of influence and control. The attack in June 1950 by North Korea on its neighbor, South Korea, prompted the United States to extend its policy of geographic containment of Soviet ambitions. Through negotiations with several Mediterranean countries, the United States established air bases that placed U.S. military aircraft in position to strike the Soviet Union should any conflict of arms threaten world stability. This history examines the work of the U.S. Army Corps of Engineers in military construction in the Mediterranean Basin (including northern and northeastern Africa) and the Middle East, which created the infrastructure that made the policies of deterrence and containment possible. This work included not only construction in support of the U.S. Army and U.S. Air Force in these areas but also work executed on behalf of our Middle East allies paid for with funds they provided. A remarkable story in its own right, the history becomes even more important, given events in the region since 1990, by providing a background understanding of the present role and position of the United States in that vital region.

The ICC/ASHRAE 700-2015 National Green Building Standard(TM) (NGBS) has been approved by the American National Standards Institute for all types of sustainable residential construction. A collaborative effort of the International Code Council, ASHRAE and the National Association of Home Builders, NGBS outlines a variety of green practices that can be incorporated into new homes and multifamily buildings, as well as hotels, dormitories and land developments. The Standard also delivers stand-alone chapters for both home remodeling and additions and renovations of multifamily buildings. The green practices address site and lot design, preparation and development; resource, energy and water efficiency; indoor environmental quality; and operation, maintenance and building owner education. Four levels--Bronze, Silver, Gold and Emerald--enable residential professionals to integrate sustainability and high performance at a level most appropriate for their businesses and specific housing markets. Changes for the 2015 Edition The 2015 edition incorporates changes that better align the NGBS with the I-codes, expands the application of innovative practices and builds upon years of building and certifying to NGBS. Some of the more notable updates include: - Substantial revisions to the Energy Efficiency chapter, which now has more stringent rating levels based upon whole-house energy savings that are above the 2015 International Energy Conservation Code. - A comprehensive update of the exterior and interior lighting provisions including common areas in multifamily building. - Mandatory installation of carbon monoxide alarms for all buildings, regardless of level of certification or local code. - Revamped stormwater management options that encourage low-impact development practices. - Greater emphasis on and recognition of multi-modal transportation options including bicycle parking, pedestrian connectivity, proximity to transit and electric-vehicle charging. - New references in the Resource Efficiency chapter for Environmental Product Declarations for both specific and industry-wide products. This latest edition includes everything needed to design, construct or remodel any residential project to the most current sustainable and green building criteria available - all under one roof!

The progress of man really started at the time he began to use metals. Until man became the master of metals life was hard, cruel and difficult. Many people seem to think these conditions of life have not changed very much. But do you realize how much easier life is because of metals? Without metals many products we know as common necessities would be impossible, while other items would be very unsatisfactory substitutes by present-day standards. Without metals our activities would depend on our ability to use wood and stone. Stone axes and hammers may have served the caveman, but they would not meet the needs of skilled craftsmen of today. With only stone and wood available as materials, practically all our modern conveniences would be non-existent. We would not have modern means of transportation—the automobile, ocean liner, train or airplane. Likewise, we would

not have modern means of communication—the radio, telephone or television. In fact, we now depend so much on metals it is difficult to think of how we could live without them.
