West's Smith-Hurd Illinois Compiled Statutes Annotated: Finance

This report summarizes the findings of the Southern Forest Futures Project, also referred to in these pages as the Futures Project. The Southern Forest Futures Project is an effort to anticipate the future and analyze what the interaction of future changes might mean for the forests of the South and the services the forests provide in the region's 13 States (fig. 1). We explore a labyrinth of driving factors, forest outcomes, and human implications to sketch how the landscape of the South might change.

Caught in an abusive marriage, Sonam Aggarwal finds no family support when she struggles to break free. However, with unwavering grit, she makes a place for herself in the world and rises like a phoenix from the ashes of her dead marriage to discover true companionship and professional success. The evolution of a knowledge society in India that places a premium on human knowledge and skills regardless of gender finally bequeaths her a coveted place in the sun. The novel focuses on the core strength of a woman that asserts her value despite external trappings and women characters who go through their individual struggle with the inevitable challenges that threaten their existence. Phoenix, a novel, traces the life of Sonam and her upper class family in South Delhi from 1983 to 2017. It highlights the curious paradoxes in Indian society: its global leadership in digitalization contrasted with antiquated prejudices and gender stereotypes.

Collaborations of physicians and researchers with industry can provide valuable benefits to society, particularly in the translation of basic scientific discoveries to new therapies and products. Recent reports and news stories have, however, documented disturbing examples of relationships and practices that put at risk the integrity of medical research, the objectivity of professional education, the quality of patient care, the soundness of clinical practice guidelines, and the public's trust in medicine. *Conflict of Interest in Medical Research, Education, and Practice* provides a comprehensive look at conflict of interest in medicine. It offers principles to inform the design of policies to identify, limit, and manage conflicts of interest without damaging constructive collaboration with industry. It calls for both short-term actions and long-term commitments by institutions and individuals, including leaders of academic medical centers, professional societies, patient advocacy groups, government agencies, and drug, device, and pharmaceutical companies. Failure of the medical community to take convincing action on conflicts of interest invites additional legislative or regulatory measures that may be overly broad or unduly burdensome. *Conflict of Interest in Medical Research, Education, and Practice* makes several recommendations for strengthening conflict of interest policies and curbing relationships that create risks with little benefit. The book will serve as an invaluable resource for individuals and organizations committed to high ethical standards in all realms of medicine.

Not long ago, a cancer diagnosis was regarded as an automatic death sentence; today there are ten million survivors. Equally impressive is the growing number of clinicians and researchers dedicated to improving the quality of survivors' lives and care. Yet despite this encouraging picture, there has never been a reliable central source for relevant clinical information — until now. This book, written by a cancer survivor and sixty other top scientist-practitioners, responds to the diverse needs of survivors and their support communities by comprehensively addressing the major issues in the field, from the burden of survivorship to secondary prevention.

William Faulkner once said, "The past is never dead. It's not even past." Nowhere can you see the truth behind his comment more plainly than in rural New England, especially Maine, New Hampshire, Vermont, and western Massachusetts. Everywhere we go in rural New England, the past surrounds us. In the woods and fields and along country roads, the traces are everywhere if we know what to look for and how to interpret what we see. A patch of neglected daylilies marks a long-abandoned homestead. A grown-over cellar hole with nearby stumps and remnants of stone wall and orchard shows us where a farm has been reclaimed by forest. And a piece of a stone dam and wooden sluice mark the site of a long-gone mill. Although slumping back into the landscape, these features speak to us if we can hear them and they can guide us to ancestral homesteads and famous sites. Lavishly illustrated with drawings and color photos. Provides the keys to interpret human artifacts in fields, woods, and roadsides and to reconstruct the past from surviving clues. Perfect to carry in a backpack or glove box. A unique and valuable resource for road trips, genealogical research, naturalists, and historians.

Riparian Areas

Phoenix

The Clean Water Act (CWA) requires that wetlands be protected from degradation because of their important ecological functions including maintenance of high water quality and provision of fish and wildlife habitat. However, this protection generally does not encompass riparian areas—the lands bordering rivers and lakes—even though they often provide the same functions as wetlands. Growing recognition of the similarities in wetland and riparian area functioning and the differences in their legal protection led the NRC in 1999 to undertake a study of riparian areas, which has culminated in *Riparian Areas: Functioning and Strategies for Management*. The report is intended to heighten awareness of riparian areas commensurate with their ecological and societal values. The primary conclusion is that, because riparian areas perform a disproportionate number of biological and physical functions on a unit area basis, restoration of riparian functions along America's waterbodies should be a national goal.
