This book will guide you to understand what happens when chords change, why you choose certain notes over certain chords, how modes are affected by chord changes, how chords are related to modes, and how to solo through chord changes on any part of the neck. It will set you up to have a firm grasp of targeting notes over the 1-4-5 Minor 12-Bar Blues which will set you up with the logic and concept to apply to all modes and all chord progressions. The rest will rely on your desire to learn a broader vocabulary of chords and scales, which are the words for creating musical statements. Learning musical and rhythmic phrases will put these words into sentences. My purpose is to help people understand some of the most commonly asked questions I get as a player and a teacher, such as: *How do I play over chords and sound melodic? *How do I target notes without chasing chords around the neck using the same old shape? *How do I know which mode to play over each chord? *How can I sound more musical when I play? These questions can be answered on a very complex level. Fortunately, I discovered a way of using the pentatonic modes to answer them all. And you can get those answers right here in this book. This book will also be valuable to guitar teachers as a curriculum guide and a method of practice.

Why does life seem to be so unfair? Or is it? Is there a God? And if there is a God, how come God can be so unjust, and why do bad things happen to good people? Religious people and philosophers have tried to answer these questions about life in the past using the metaphors of their day and age, as well as of their professions. Old metaphor might have resonated with people back then and might still make sense to some today, but that is leaving out a multitude of others who are finding it difficult to relate to this language; especially the young. This book explains how things in life work using the language and the metaphors of mathematics, chemistry and physics that everybody has been acquiring in school. Here are some of the answers to how things work in life: -The word God is a metaphor. God is "everything," and God is fair. -The world is "thoughts," but that does not mean that you just sit there and think about becoming great to achieve greatness the way it's been touted in the book titled "The Secret" by Rhonda Byrne! No! That's wrong! And it's not how the equation works! -Good and bad are relative quantities. -War is necessary to keep the balance of power between good and bad, but it doesn't have to result in bloodshed. -Sex is a commodity and it has a sublime value that has to be implemented. -Love is a binding force. Lust and Dependency belong on the opposite ends of the spectrum of love. -Like does not

belong on the spectrum of love. -We do have a choice, and our choice does make a difference. -Our reaction is the only variable that can change every equation in our life. -There are different degrees of only two religions in the world: Conservative and Liberal. And more
