Using an assemblage approach to study how Muslim women in Norrebro, Denmark use their phones, Karen Waltorp examines how social media complicates the divide between public and private in relation to a group of people who find this distinction of utmost significance. Building on years of ethnographic fieldwork, Waltorp's ethnography reflects the trust and creativity of her relationships with these women which in turn open up nuanced discussions about both the subject at hand and best practice in conducting anthropological research. Combining rich ethnography with theoretical contextualization, Waltorp's book alternates between ethnography and analysis to illuminate a thoroughly modern community, and reveals the capacity of image-making technology to function as an infrastructure for seeing, thinking and engaging in fieldwork as an anthropologists. Waltorp identifies a series of important issues around anthropological approaches to new media, contributing to new debates around the anthropology of automation, data and self-tracking.

Nikon D3300

Providing readers with a study of learning how to turn poorly lit images into finely crafted, masterfully lit photographs, this guidebook instills photographers with the self-confidence to think on their feet and photograph any portrait subject anywhere. Acclaimed photographer Neil van Niekirk presents seven distinctly different lighting scenarios—available light, exposure metering, a touch of flash, bounced on-camera flash, off-camera flash, video light, and hard sunlight—to show readers how to manipulate the direction and quality of light, the subject's and photographer's position, and numerous other variables so as to turn a bad image into a stunning, professional-level portrait. Packed with dozens of instructional, full-color photos, this work also features 10 sample photo sessions, allowing readers the opportunity to see the seven lighting scenarios put to practice.

Now that you've bought that amazing new DSLR, you need a book that goes beyond the camera manual to teach you how to take those great shots. One key element is composition—the creative arrangement of components in the shot, and the way a viewer's eye travels through an image. With *Composition: From Snapshots to Great Shots*, author and photographer Laurie Excell starts with the basics of composition and explores how the elements of color, shape, angles, and contrast work to create compelling images. Contributing photographers, John Batdorff, David Brommer, Rick Rickman, and Steve Simon, provide unique perspectives on black and white, sports, art history, and other subjects related to composition. Beautifully illustrated with large, vibrant photos, this book teaches you how to take control of your photography to get the image you want every time you pick up the camera. Follow along with your friendly and knowledgeable guides, and you will learn about: Key camera features that affect composition, including the exposure triangle (ISO, aperture, and shutter speed) Shadow and light and how to direct the viewer's eye to your subject Lines and shapes that create visual paths to points of interest in your image The role of color—using complementary or contrasting colors—to add your own unique artistic expression Spatial relationship and placing your subject within the frame for portraits, action shots, or landscapes And once you've got the shot, show it off! Join the book's Flickr group, share your photos, and discuss how you use your camera to get great shots at flickr.com/groups/composition_fromsnapshottstogreatshots.
