Alternative Investments: A Primer for Investment Professionals provides an overview of alternative investments for institutional asset allocators and other overseers of portfolios containing both traditional and alternative assets. It is designed for those with substantial experience regarding traditional investments in stocks and bonds but limited familiarity regarding alternative assets, alternative strategies, and alternative portfolio management. The primer categorizes alternative assets into four groups: hedge funds, real assets, private equity, and structured products/derivatives. Real assets include vacant land, farmland, timber,

infrastructure, intellectual property, commodities, and private real estate. For each group, the primer provides essential information about the characteristics, challenges, and purposes of these institutional-quality alternative assets in the context of a well-diversified institutional portfolio. Other topics addressed by this primer include tail risk, due diligence of the investment process and operations, measurement and management of risks and returns, setting return expectations, and portfolio construction. The primer concludes with a chapter on the case for investing in alternatives.

provides a thorough explanation of financial modeling and analysis while describing the practical application of newly-developed techniques. Theoretical discussion, case studies and step-by-step guides allow readers to master many difficult modeling problems and also explain how to build highly structured models from the ground up. The companion website includes downloadable examples, templates, and hundreds of exercises that allow readers to immediately apply the complex ideas discussed. Financial valuation is an in-depth process, involving both objective and subjective parameters. Precise modeling is critical, and thorough, accurate analysis is what bridges the gap from model to value. This book allows readers to gain a true mastery of the principles underlying financial modeling and valuation by helping them to: Develop flexible and accurate valuation analysis incorporating cash flow waterfalls, depreciation and retirements, updates for new historic periods, and dynamic presentation of scenario and sensitivity analysis; Build customized spreadsheet functions that solve circular logic arising in project and corporate valuation without cumbersome copy and paste macros; Derive accurate measures of normalized cash flow and implied valuation multiples that account for asset life, changing growth, taxes, varying returns and cost of capital; Incorporate stochastic analysis with alternative time series equations and Monte Carlo simulation without add-ins; Understand valuation effects of debt sizing, sculpting, project funding, re-financing, holding periods and credit enhancements. Corporate and Project Finance Modeling provides comprehensive guidance and extensive explanation, making it essential reading for anyone in the field.

The most cutting-edge read on CDO and credit market structures Collateralized Debt Obligations and Structured Finance provides a state-of-the-art look at the exploding CDO and structured credit products market. Financial expert Janet Tavakoli examines securitization topics never before seen in print, including the huge increase in the CDO arbitrage created by synthetics; the tranches most at risk from this new technology; dumping securitizations on bank balance sheets; the

abuse of offshore vehicles by companies such as Enron; and securitizations made possible by new securitization techniques and the introduction of the Euro. This valuable guide comprehensively covers one of the fastest growing markets on Wall Street, predicting where new bank regulations and other developments may lead to product growth or product extinction. While providing an overview of the market and its dynamic growth, Collateralized Debt Obligations and Structured Finance explores the types of products offered, hedging techniques, and valuation and risk/return issues associated with investment in CDOs and synthetic CDOs. Janet M. Tavakoli, MBA (Chicago, IL), has over eighteen years of experience trading, structuring, and marketing derivatives and structured products with major financial institutions in New York and London. She is also the author of Credit Derivatives and Synthetic Structures, now in its Second Edition (0-471-41266-X).

In this book, two of America's leading economists provide the first integrated treatment of the conceptual, practical, and empirical foundations for credit risk pricing and risk measurement. Masterfully applying theory to practice, Darrell Duffie and Kenneth Singleton model credit risk for the purpose of measuring portfolio risk and pricing defaultable bonds, credit derivatives, and other securities exposed to credit risk. The methodological rigor, scope, and sophistication of their state-of-the-art account is unparalleled, and its singularly in-depth treatment of pricing and credit derivatives further illuminates a problem that has drawn much attention in an era when financial institutions the world over are revising their credit management strategies. Duffie and Singleton offer critical assessments of alternative approaches to credit-risk modeling, while highlighting the strengths and

weaknesses of current practice. Their approach blends in-depth discussions of the conceptual foundations of modeling with extensive analyses of the empirical properties of such credit-related time series as default probabilities, recoveries, ratings transitions, and yield spreads. Both the "structural" and "reduced-form" approaches to pricing defaultable securities are presented, and their comparative fits to historical data are assessed. The authors also provide a comprehensive treatment of the pricing of credit derivatives, including credit swaps, collateralized debt obligations, credit guarantees, lines of credit, and spread options. Not least, they describe certain enhancements to current pricing and management practices that, they argue, will better position financial institutions for future changes in the financial markets. Credit Risk is an indispensable resource for risk managers, traders or regulators dealing with financial products with a significant credit risk component, as well as for academic researchers and students.

Business Organizations, Second Edition is a pedagogically rich book that recaptures student engagement in the course without sacrificing basic rigor. The traditional coverage of most books in the field is retained, but modernized in reflecting the importance of unincorporated entities and small business counseling problems. Transaction-oriented problems put the student in the practice role of advising a variety of businesses. An expository approach provides clear context for cases. Features include flowcharts, connections boxes, self-testing exercises, an interspersed series of exercises on ethics for business lawyers, a glossary of terms, and sidebars on numerical concepts and skills. Through the use of side-bar explanations or otherwise, the chapters or major sections of chapters in the book stand alone, facilitating teaching in almost any order. An online supplement includes a “business concepts for lawyers” module to be assigned as an instructor desires, as well as a variety of sample documents to show students the actual materials that lawyers work with every day.
