British Medical Journal

Preserve Your Love for Science

This book is about multilingualism across the lifespan: how languages are learned at different life stages, why this is so, and how to take advantage of this knowledge to more efficiently integrate them into our lives.

The Medical Times and Gazette

A Critical Dictionary of English Literature, and British and American Authors, Living and Deceased, from the Earliest Accounts to the Middle of the Nineteenth Century

Guide to the System of Cataloguing of the Reference Library

National Union Catalog

Dictionary of Philosophy and Psychology

Journal on theory and practice of universal and special classification systems and thesauri.

The Literary Year-book

Critical Dictionary of English Literature, and British and American Authors, Living and Deceased, from the Earliest Accounts to the Middle of the Nineteenth Century

a critical dictionary of english literature and british and american authors

A world list of books in the English language.

A Critical Dictionary of English Literature and British and American Authors, Living and Deceased, from the Earliest Accounts to the Latter Half of the Nineteenth Century

This book chronicles the conceptual and methodological facets of psychiatry and medical psychology throughout history. There are no recent books covering so wide a time span. Many of the facets covered are pertinent to issues in general medicine, psychiatry, psychoanalysis, and the social sciences today. The divergent emphases and interpretations among some of the contributors point to the necessity for further exploration and analysis.

East European Accessions Index

American national trade bibliography.

A System of Legal Medicine

A life of one of the most successful American physicians of the nineteenth century.

Discovering Psychology

The Handbook of Psychophysiology has been the authoritative resource for more than a quarter of a century. Since the third edition was published a decade ago, the field of psychophysiological science has seen significant advances, both in traditional measures such as electroencephalography, event-related brain potentials, and cardiovascular assessments, and in novel approaches and methods in behavioural epigenetics, neuroimaging, psychoneuroimmunology, psychoneuroendocrinology, neuropsychology, behavioural genetics, connectivity analyses, and non-contact sensors. At the same time, a thoroughgoing interdisciplinary focus has emerged as essential to scientific progress. Emphasizing the need for multiple measures, careful experimental design, and logical inference, the fourth edition of the Handbook provides updated and expanded coverage of approaches, methods, and analyses in the field. With state-of-the-art reviews of research in topical areas such as stress, emotion, development, language, psychopathology, and behavioural medicine, the Handbook remains the essential reference for students and scientists in the behavioural, cognitive, and biological sciences.

Living Languages

Check out a preview. More than any other introductory psychology textbook, the Hockenburys' brief book is the one in which students see themselves - and the world they live in. The new edition builds on that distinction, presenting the discipline with a unique understanding of today's students in all their diversity, emphasizing the field's immediate impact on their lives. Without sacrificing science, Don and Sandy Hockenbury draw on personal experiences and anecdotes to illustrate essential concepts and important research directions.
