Models and modelling play a central role in the nature of science, in its conduct, in the accreditation and dissemination of its outcomes, as well as forming a bridge to technology. They therefore have an important place in both the formal and informal science education provision made for people of all ages. This book is a product of five years collaborative work by eighteen researchers from four countries. It addresses four key issues: the roles of models in science and their implications for science education; the place of models in curricula for major science subjects; the ways that models can be presented to, are learned about, and can be produced by, individuals; the implications of all these for research and for science teacher education. The work draws on insights from the history and philosophy of science, cognitive psychology, sociology, linguistics, and classroom research, to establish what may be done and what is done. The book will be of interest to researchers in science education and to those taking courses of advanced study throughout the world.

The Goat in the Rug

Is Nick Allen a troublemaker? He really just likes to liven things up at school -- and he's always had plenty of great ideas. When Nick learns some interesting information about how words are created, suddenly he's got the inspiration for his best plan everthe frindle. Who says a pen has to be called a pen? Why not call it a frindle? Things begin innocently enough as Nick gets his friends to use the new word. Then other people in town start saying frindle. Soon the school is in an uproar, and Nick has become a local hero. His teacher wants Nick to put an end to all this nonsense, but the funny thing is frindle doesn't belong to Nick anymore. The new word is spreading across the country, and there's nothing Nick can do to stop it.

Some people collect stamps. Other people collect coins. Carol Otis Hurst's father collected rocks. Nobody ever thought his obsession would amount to anything. They said, "You've got rocks in your head" and "There's no money in rocks." But year after year he kept on collecting, trading, displaying, and labeling his rocks. The Depression forced the family to sell their gas station and their house, but his interest in rocks never wavered. And in the end the science museum he had visited so often realized that a person with rocks in his head was just what was needed. Anyone who has ever felt a little out of step with the world will identify with this true story of a man who followed his heart and his passion.

McGraw-Hill Science

Many middle school teachers across the United States use student science notebooks as part of their daily classroom instruction. Many others would like to but are not sure exactly how to start. Following his bestselling *Using Science Notebooks in Elementary Classrooms*, Michael Klentschy now examines how the student science notebook can be an invaluable tool at the middle school level. Strategic sentence starters, discussion starters, graphic organizers, and writing scaffolds are included to create or build on existing knowledge. Numerous examples of student work are provided---even an entire notebook entry for one lesson, from making initial predictions to defending conclusions. A discussion of the needs of English learners is also provided, with specific strategies to increase both language fluency and writing proficiency. Scoring guides and other approaches to giving student feedback are included to both underline the importance of feedback and provide some classroom-tested ways to do it.
