Sports economics is a relatively new field of research that is experiencing rapid growth in the economics literature. The importance of the sports industry to economies coupled with the availability of financial and productivity data have made the study of sports economics a useful avenue for exploring research questions that have eluded mainstream economics fields. The main goal of this Special Issue of the International Journal of Financial Studies is to encourage theoretical and applied research in sports economics, which is of interest to both academics and practitioners. For this purpose, this Special Issue on "Sports Finance" invites papers on topics, such as, but not limited to, salary determination, ticket pricing, revenue sharing, salary caps, competitive balance, new stadium financing, rival league behavior, determinants of revenue, television and media, tournament prize structures, financial distress in professional sports, financial fair play, financial control of sports clubs, Third Party Ownership, financial efficiency in professional sports, budget constraints and sport performance, financial information of sports, ownership of professional sport clubs and Crowdfunding in sports. Papers on both professional and amateur sports are welcome.

Entrepreneurial finance is a discipline that studies financial resource mobilization, resource allocation, risk moderation, optimization in financial contracting, value creation, and value monetization within the context of entrepreneurship. However, without proper strategic consideration the discipline is incomplete. This book examines how the activity of entrepreneurial finance can be enhanced via a concentration on value creation and through improved strategic decision-making. The most unique feature of the book is its focus on value creation. For entrepreneurs, value creation is not a one-off activity, but rather a continuous cycle of incremental improvements across a wide range of business activities. Entrepreneurial value creation is described in four comprehensive stages: value creation, value measurement, value enhancement, and value realization, referred to as the C-MER model. This book focuses on what creates value rather than merely presenting value creation in a straight accounting framework. At the same time, deliberate and tactical planning and implementation ensure that the firm does not ignore the components necessary for it to survive and flourish. Vigorous strategic deliberations maximize the entrepreneurial firm's chances of making the right business decisions for the future, enable the firm to manage its available financial and non-financial resources in the most optimal manner, ensure that the necessary capital is secured to progress the development of the firm to its desired

development level, and build value. While financial considerations are important, the field of strategic entrepreneurial finance represents a fusion of three disciplines: strategic management, financial management, and entrepreneurship. This orientation represents a natural evolution of scholarship to combine specific domains and paradigms of naturally connected business disciplines and reflects the need to simultaneously examine business topics from different perspectives which may better encapsulate actual entrepreneurial practices.

Financial Crises: Causes, Consequences, and Policy Responses provides a comprehensive overview of research into financial crises and policy lessons learned. The book covers a wide range of crises, including banking, balance of payments, and sovereign debt crises. It begins with an overview of the various types of crises and introduces a comprehensive database of crises. Broad lessons on crisis prevention and management, as well as the short-term economic effects of crises, recessions, and recoveries are discussed. The medium-term effects of financial crises on economic growth, as well as policy measures to prevent booms, mitigate busts, and avoid crises are analyzed. Finally, policy measures for mitigating the adverse impact of crises and ways to restructure banks, households, and sovereigns are presented. The collection of research in this book provides an excellent overview of critical policy areas, with valuable lessons on how countries can better monitor their economies and financial systems.

Corporate Governance

This book builds on a year-long discussion with a group of academics, policy-makers and industry experts to provide a long-term contribution to the Capital Markets Union project, launched by the European Commission in 2015. It identifies 36 cross-border barriers to capital markets integration and provides an organic plan, consisting of 33 policy recommendations, to relaunch EU financial integration. These aim to improve the key components of cross-border capital market transactions.

This report presents international investment trends and prospects at global, regional and national levels, as well as the evolution of international production and global value chains. It analyses the latest developments in new policy measures for investment promotion, facilitation and regulation around the world, as well as updates on investment treaties, their reform and investment dispute settlement cases. It provides an overview of industrial policy models for countries at different development levels and the role of investment policies within each model. It analyses the investment policy implications of the new industrial revolution for high-, middle- and low-income countries and offers a toolkit for investment policymakers on how to use investment policies for new industrial development strategies.

Survey of Current Business

Europe is often presented as a declining global power, in which red tape, incumbency interests and governance flaws hamper economic performance, innovation and productivity. Part of this can be traced back to the inherent challenge and ambition of the European integration project; but also to external factors, including the rise of the United States as a global superpower during the past century, and the worldwide diffusion of ideas, especially in politics and economics, which were seldom originated in Europe, or tailored to its peculiar legal, economic and social traditions. Until recently, Europe has sought to carve out its model and role in global governance by mimicking many US policy approaches: shareholder capitalism, deregulation and unconstrained movement of capital. As the global community increasingly sees the rise of protectionist stances, and a growing inability to face emerging challenges such as sustainable development and the breath-taking rise of disruptive digital technologies, Europe should look at its best qualities to revamp and reclaim its position in the global order, to the benefit of all. The prospect of Brexit, while certainly not favourable for the Union, paradoxically opens up new opportunities to face emerging challenges

with a greater degree of cohesion. This new book, a joint effort between Donald Kalff and a group of CEPS researchers led by Andrea Renda, aims at identifying and exploring Europe's 'hidden treasures', often neglected competitive advantages that could, if adequately nurtured, return the Old Continent to the forefront of the global order. 'Hidden treasures' are a feature of the EU economy, legal system or legal tradition that are being given insufficient attention in EU public policy, and which bear the potential to increase Europe's competitiveness and overall positioning in the global context. The authors find them in ten policy domains, from contract law to corporate governance, taxation, control of corruption, competition policy, trade, innovation and the EU's unique approach to governing the digital economy. Uncovering and promoting hidden treasures becomes, as of today, a timely and highly needed exercise, as the EU approaches its post-elections transition, and the global governance context seems to be rapidly changing, shaping a new playing field in which Europe has no obvious allies, and is increasingly challenged by superpowers with different, if not diverging, priorities.

Behavioralizing Finance

A practice-oriented guide to using C# to design and program pricing and trading models In this step-by-step guide to software development for financial analysts, traders, developers and quants, the authors show both novice and experienced practitioners how to develop robust and accurate pricing models and employ them in real environments. Traders will learn how to design and implement applications for curve and surface modeling, fixed income products, hedging strategies, plain and exotic option modeling, interest rate options, structured bonds, unfunded structured products, and more. A unique mix of modern software technology and quantitative finance, this book is both timely and practical. The approach is thorough and comprehensive and the authors use a combination of C# language features, design patterns, mathematics and finance to produce efficient and maintainable software. Designed for quant developers, traders and MSc/MFE students, each chapter has numerous exercises and the book is accompanied by a dedicated companion website, <http://www.datasimfinancial.com/forum/viewforum.php?f=196&sid=f30022095850dee48c7db5ff62192b34>, providing all source code, alongside audio, support and discussion forums for readers to comment on the code and obtain new versions of the software.

Barron's National Business and Financial Weekly

Imperialism

Behavioralizing Finance suggests that finance is moving to a new paradigm that combines structural features from neoclassical finance and realistic assumptions from behavioral finance. The behavioralization of finance involves intellectual shifts by two groups - the first shift features neoclassical economists explicitly incorporating psychological elements into their models and the second shift

features behavioral economists developing a systematic, rigorous framework. Behavioralizing Finance starts by describing the highlights of the behavioral finance literature and identifying some of the weaknesses of this literature. The remainder of the volume has two main objectives: To discuss works which have emerged since the past surveys appeared, or which those surveys overlooked for one reason or another. To present some ideas about trends toward a unifying framework for behavioral finance that captures some of the rigor in neoclassical finance. Behavioralizing Finance provides a structured approach to behavioral finance in respect to underlying psychological concepts, formal framework, testable hypotheses, and empirical findings. A key theme of the volume is that the future of finance will combine realistic assumptions from behavioral finance and rigorous analysis from neoclassical finance."

The Future of Finance

The COVID-19 pandemic has, with alarming speed, dealt a heavy blow to an already-weak global economy, which is expected to slide into its deepest recession since the second world war, despite unprecedented policy support. The global recession would be deeper if countries take longer to bring the pandemic under control, if financial stress triggers defaults, or if there are protracted effects on households and firms. Economic disruptions are likely to be more severe and protracted in emerging market and developing economies with larger domestic outbreaks and weaker medical care systems; greater exposure to international spillovers through trade, tourism, and commodity and financial markets; weaker macroeconomic frameworks; and more pervasive informality and poverty. Beyond the current steep economic contraction, the pandemic is likely to leave lasting scars on the global economy by undermining consumer and investor confidence, human capital, and global value chains. Being mostly a reflection of the recent plunge in global energy demand, low oil prices are unlikely to provide much of a boost to global growth in the near term. While policymakers' immediate priorities are to address the health crisis and moderate the short-term economic losses, the likely long-term consequences of the pandemic highlight the need to forcefully undertake comprehensive reform programs to improve the fundamental drivers of economic growth, once the crisis abates. Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on emerging market and developing economies, on a semiannual basis (in January and June). The January edition includes in-depth analyses of topical policy challenges faced by these economies, while the June edition contains shorter analytical pieces.

Financial Reporting

Corporate governance around the world continues to develop rapidly and this new edition has been extensively rewritten to reflect these changes. The global financial crisis has led to a whole host of changes in corporate governance requirements, which are analysed by Bob Tricker.

Commerce Reports

The 2019 edition of the World Investment Report focuses on special economic zones (SEZs) which are widely used across most developing and many developed economies. Although the performance of many zones remains below expectations, the rate of establishment of new zones is accelerating as governments increasingly compete for internationally mobile industrial activity. Policymakers face not only the traditional challenges to making SEZs succeed, including the need for strategic focus, sound governance models, and effective investment promotion tools, but also new challenges brought about by the sustainable development imperative, the new industrial revolution, and changing patterns of international production. The Report explores the place of SEZs in today's global investment landscape and provides guidance for policymakers on how to make SEZs work for sustainable development. It presents international investment trends and prospects at global, regional and national levels, as well as the evolution of international production and global value chains. It analyses the latest developments in new policy measures for investment promotion, facilitation and regulation around the world, as well as updates on investment treaties, their reform and investment dispute settlement cases.
