Demon warrior puppets, sword-wielding Taoist priests, spirit mediums lacerating their bodies with spikes and blades—these are among the most dramatic images in Chinese religion. Usually linked to the propitiation of plague gods and the worship of popular military deities, such ritual practices have an obvious but previously unexamined kinship with the traditional Chinese martial arts. The long and durable history of martial arts iconography and ritual in Chinese religion suggests something far deeper than mere historical coincidence. Avron Boretz argues that martial arts gestures and movements are so deeply embedded in the ritual repertoire in part because they iconify masculine qualities of violence, aggressivity, and physical prowess, the implicit core of Chinese patriliney and

patriarchy. At the same time, for actors and audience alike, martial arts gestures evoke the mythos of the jianghu, a shadowy, often violent realm of vagabonds, outlaws, and masters of martial and magic arts. Through the direct bodily practice of martial arts movement and creative rendering of jianghu narratives, martial ritual practitioners are able to identify and represent themselves, however briefly and incompletely, as men of prowess, a reward otherwise denied those confined to the lower limits of this deeply patriarchal society. Based on fieldwork in China and Taiwan spanning nearly two decades, *Gods, Ghosts, and Gangsters* offers a thorough and original account of violent ritual and ritual violence in Chinese religion and society. Close-up, sensitive portrayals and the voices of ritual actors themselves—mostly working-class men, many of them members of sworn brotherhoods and gangs—convincingly link martial ritual practice to the lives and desires of men on the margins of Chinese society. This work is a significant contribution to the study of Chinese ritual and religion, the history and sociology of Chinese underworld, the history and anthropology of the martial arts, and the anthropology of masculinity.

Bernard Rosner's FUNDAMENTALS OF BIostatISTICS is a practical introduction to the methods, techniques, and computation of statistics with human subjects. It prepares students for their future courses and careers by introducing the statistical methods most often used in medical literature. Rosner minimizes the amount of mathematical formulation (algebra-based) while still giving complete explanations of all the important concepts. As in previous editions, a major strength of this book is that every new concept is developed systematically through completely worked out examples from current medical research problems. Most methods are illustrated with specific instructions as to implementation using software either from SAS, Stata, R, Excel or Minitab. This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.
