Hypogean (cave, artesian) fishes have fascinated researchers even before they were described in the scientific literature in 1842. Since then, a number of scientists have used them to justify their own evolutionary ideas, from neo-Lamarckism to neo-Darwinism, from neutral evolution to selectionist approaches. Research in recent years has shown that these fishes are much more complex in their adaptations to the subterranean environment than previously believed: there are those with features expected from living in total darkness (complete blindness and depigmentation) and poor in nutrients (extremely low metabolic rates); others differ very little, if any, from their epigeal (surface) ancestors in their morphology and physiology (but not so in their behavior). Some of them even live in nutrient-rich environments. Actually, one of the most overlooked facets of these animals is that there are more species of hypogean fishes without troglomorphisms (blindness, depigmentation) than with troglomorphic ones. The study of these apparently 'unadapted' fishes is providing new insights into our understanding of the evolution of phenotypic characters, founding effect, behavioral, and physiological adaptations. The 86 species of troglomorphic fishes described so far belong to 18 different families, many of which would hardly fit the

notion that they were 'preadapted' to conquer the underground environment. Further, many troglomorphic `species' show very little genotypic differentiation when compared with their putative ancestors, indicating that massive phenotype changes can be achieved via little genetic reorganization, a reorganization that mostly affects regulatory genes. These and many other topics are discussed in this volume containing 29 papers, written by 41 authors from 9 countries. Hopefully, this volume will convince many other researchers that hypogean fishes represent a unique opportunity to study a concept in evolutionary biology that is only superficially understood: convergent evolution.

For the third worldwide report of its kind, THE LOCATION GROUP again scouted all highly frequented retail locations and shopping malls worldwide. The previous reports reached 100'000 readers so far. The very positive feedback and numerous requests we received on the 2012 and 2013 reports prompted us to extend our study to cover over 800 high streets and 500 shopping malls.

Biology and Evolution of the Mexican Cavefish features contributions by leading researchers in a comprehensive, unique work that examines a number of distinct areas of biology—evolution, development, ecology, and behavior—using the Mexican cavefish as a powerful model system to further understanding of basic biological processes such as eye degeneration, hearing, craniofacial development, sleep, and metabolic function. These fish are currently being used to better understand a number of issues related to human health, including age-related blindness, sleep, obesity, mood-related disorders, and aging. The recent sequencing of the cavefish genome broadens the interest of this system to groups working with diverse biological systems, and has helped researchers identify genes that regulate sleep, eye degeneration, and metabolic function. Mexican cavefish are particularly powerful for the study of biological processes because these fish evolved independently in twenty-nine caves in the Sierra de el Abra Region of Northeast Mexico. These fish have dramatic adaptations to the cave environment, and this can be used to identify genes involved in disease-related traits. This scholarly text will be of interest to researchers and students throughout diverse areas of biology and ecology. It includes photographs of animals and behavior in laboratory and natural settings that will also increase interest and accessibility to non-experts. Includes a mixture of images and illustrations such as the geographical distribution of cave pools and the developmental biology of the nervous system Features a companion site with geographical maps Fills a notable gap in the literature on a topic of broad interest to the scientific community Presents the recent sequencing of the cavefish genome as a groundbreaking development for researchers working with diverse biological systems

Crimson Beauty is born only a few years before WW1. After his mother died, Crimson Beauty is raised by grooms as a nervous and fidgety colt. Follow his adventures as he grows into an adult horse, learns to overcome his faults, and falls in love with a golden mare. Inspired by the beloved children's classic, Black Beauty, by Anna Sewell, this children's book follows the life of a stallion who must learn to love and have confidence in his master. Black Beauty's son is a colt who doesn't always trust the human at his head, who doesn't always do what he is told, and inevitably always manages to get himself in and out of trouble. The illustrated book provides a fun story from the horse's perspective.

It's bedtime, but Woolly the little lamb can't find his mother. Who will tuck him in? "I will, I will," said Mrs. Cow. "Don't you worry. I know how. Everything will be all right. I'll tuck you in real snug and tight." But Mrs. Cow wraps poor Woolly up so tight that he can't move. "STOP!" cries Woolly. "That's not right! Oh, who will tuck me in tonight?" Mrs. Cat, Mrs. Horse, Mrs. Pig, and Mrs. Duck all try, but their efforts prove disastrous, and Woolly grows more and more desperate. Mother Sheep returns at last and tucks her little one in just right--"as only a mother can. From the team who created the best-selling "Little Bunny's Sleepless Night comes another comic, yet sweet and satisfying, bedtime story.

Civilizations come and go and they don't always go quietly. In our global civilization, the consequence of it all crashing is

going to be far-reaching, and with nowhere to hide. With so many moving parts and a lack of long-term stewardship by our leaders, odds are good that you will want to make at least a few preparations but the question you often ask is: how? That's where I come in. In *Beyond Collapse*, we not only get you prepared for such an event, but we also help you and your fellow survivors come together, defend one another, preserve what may be lost and rebuild civilization together. Unlike most books of this type, we don't require a paramilitary mindset, tinfoil headgear, bunkers, or living "off-grid." Everything in here is geared towards gaining skills and resources that are just as useful and socially acceptable in peaceful times as they will be when society and civilization crashes. You will find this book useful for beginners, or those who have been preparing for a long time. The best part is, you will find it useful even if civilization holds up just fine.

New York Times Bestseller Award-winning and New York Times bestselling author Laura Lippman's Tess Monaghan—first introduced in the classic *Baltimore Blues*—must protect an up-and-coming Hollywood actress, but when murder strikes on a TV set, the unflappable PI discovers everyone's got a secret. "[A] welcome addition to Tess Monaghan's adventures and an insightful look at the desperation that drives those grasping for a shot at fame and those who will do anything to keep it."—*San Francisco Chronicle* When private investigator Tess Monaghan literally runs into the crew of the fledgling TV series *Mann of Steel* while sculling, she expects sharp words and evil looks, not an assignment. But the company has been plagued by a series of disturbing incidents since its arrival on location in Baltimore: bad press, union threats, and small, costly on-set "accidents" that have wreaked havoc with its shooting schedule. As a result, *Mann's* creator, Flip Tumulty, the son of a Hollywood legend, is worried for the safety of his young female lead, Selene Waites, and asks Tess to serve as her bodyguard. Tumulty's concern may be well founded. Recently, a Baltimore man was discovered dead in his home, surrounded by photos of the beautiful—if difficult—aspiring star. In the past, Tess has had enough trouble guarding her own body. Keeping a spoiled movie princess under wraps may be more than she can handle since Selene is not as naive as everyone seems to think, and instead is quite devious. Once Tess gets a taste of this world of make-believe—with their vanities, their self-serving agendas, and their remarkably skewed visions of reality—she's just about ready to throw in the towel. But she's pulled back in when a grisly on-set murder occurs, threatening to topple the wall of secrets surrounding *Mann of Steel* as lives, dreams, and careers are scattered among the ruins.
