Object Lessons is a series of short, beautifully designed books about the hidden lives of ordinary things. While we all use remote controls, we understand little about their history or their impact on our daily lives. Caetlin Benson-Allot looks back on the remote control's material and cultural history to explain how such an innocuous media accessory has changed the way we occupy our houses, interact with our families, and experience the world. From the first wired radio remotes of the 1920s to infrared universal remotes, from the homemade TV controllers to the Apple Remote, remote controls shape our media devices and how we live with them. Object Lessons is published in partnership with an essay series in the *The Atlantic*.

This book explores the features and capabilities of the camera in a way that far surpasses the user's manual. It guides you through the camera features with step-by-step setting adjustments and detailed how, when, and why explanations for each option. Every button, dial, switch, and menu configuration setting is explored in a friendly manner, with suggestions and tips for setup according to various shooting styles. Carol and Brian go beyond just the camera itself and share how third-party software and optional accessories can improve on the camera's standard commands. You'll even learn how the electronic viewfinder, the fixed mirror, and Sony's novel shutter design improve the camera's utility for critical scientific photography (i.e., photomicrography and photography through the telescope).
