Analysis for Oakridge, Oregon

Seminar paper from the year 2003 in the subject Business economics - Business Management, Corporate Governance, University of Phoenix, 13 entries in the bibliography, language: English, abstract: As technology changes business on a day-to-day basis, one thing continues to remain the same; the human component of any business is critical. Although processes and tasks can often be automated, saving valuable man-hours in the process, this automation means that each human employee who is left is just that much more important. For this reason, Human Resources and the functions they provide are critical to a company's success. Without a strong, innovative Human Resources team, with the processes and procedures in place to allow them to work effectively, the best employees cannot be consistently hired or retained. A company can have the best product or service in the world, but if their staff is lacking, sooner or later their company will suffer. In the end, Human Resources has a dramatic effect on a company's bottom line. Cisco Systems, Inc. is one of the companies that truly has an appreciation for this critical business component.

The transformational technologies of the Internet-Web compound continue to exert a vast and readily apparent influence on the way we live and work. In recent times, internet penetration is now very high in most parts of the world, impacting the context and content of the workplace and the boundary between work and private life is even more porous. Not only has the reach increased, but the technologies to access the Internet-Web have further evolved towards increasing portability. The hardware evolution from desktops to laptops to mobile technologies (phones,

tablets, watches, eyeglasses) marches forward. The increasing mobility and 24/7 accessibility offers the opportune time to revisit the transformations occurring. Today the Internet consists of billions of digital devices, people, services and other physical objects with the potential to seamlessly connect, interact and exchange information about themselves and their environment. Organizations now use these digital devices and physical objects to produce and consume Internet-based services. This new Internet ecosystem is commonly referred to as the Internet of People, Things and Services (IoPTS). In this follow-up to their 2006 volume, Simmers & Anandarajan examine how The Internet of People, Things and Services (IoPTS) transforms our workplaces. Information and communications technology (ICT) expansion from desktops to laptops to ubiquitous smart objects that sense and communicate directly over the internet - the IoPTS - offers us the opportune time to revisit how the Internet transforms our workplaces.

Scholarly Research Paper from the year 2007 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1,3, University of Applied Sciences Berlin, course: Marketing, language: English, comment: This paper provides content on 31 pages and furthermore, there is an Integral Total Management Checklist at the end giving a 360-degree feedback to the topic under all management perspectives., abstract: Due to strong competition and a continuous market change, most companies engage in strategic planning today to become or stay competitive in the long run. Strategy is all-embracing. Strategy has to capture internal and external aspects, that means to comprise competencies and market opportunities. Strategy has to keep in view the own company, the customers and the competitors. The challenge is to create customer values and competitive advantages to assure benefits and growth. As a result, the starting point of every strategic decision demonstrates the recognition and the analysis of the company's current situation containing a high variety of parameters. These parameters are generally defined by the company's influence into internal and external parameters. However, the understanding of the company's situation is only defined in absolute by analysing parameters and its

bilateral dependencies. Therefore, the combination of the company's internal factors and the external environmental circumstances presents the basis for the strategy development and the resulting organisational marketing goals and application of the marketing instruments. The SWOT analysis is a strategic planning tool used to evaluate the Strengths, Weaknesses, Opportunities and Threats of a company. It provides information that is helpful in matching the company's resources and capabilities to the competitive environment in which it operates. The resulting SWOT matrix contrasts the results of the internal analysis (strengths and weakness) and the ex

Seminar paper from the year 2008 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1,0, University of Applied Sciences Berlin, language: English, abstract: Marketing offers numerous valuable tools to analyze a company's current situation. Though, most of them have the weakness of providing only a very isolated view that is not suitable for a long-term entrepreneurial decision. The SWOT analysis, however, pursues an integrated approach including key company and environmental variables. The objective is the confrontation of the company's internal strengths and its

weaknesses as well as company-external business opportunities and risks in order to generate possible strategic options. The SWOT analysis particularly supports a combined and integrated approach of the current company situation enabling well-balanced and comprehensive decisions. One main benefit is thus the reduction of complexity through the integrated approach, leaving the key factors and strategies as analytical residue. In practice, the SWOT method is a well established tool to analyze business units in larger companies and smaller start-ups in particular during their launch. The SWOT analysis though reveals limited possibilities when analyzing all business units of large companies. For this task other, more holistic, approaches as the share-holder-value concept or the portfolio analysis are appropriate. However, this large field of tools will not be treated in this assignment. The SWOT analysis is though, despite its disadvantages, one of the most important instruments for the internal analysis of a company's situation that - in every case - delivers a pretty comprehensive and resilient foundation for further entrepreneurial decisions and strategic planning.

Research paper from the year 2013 in the subject Business economics - Business Management, Corporate Governance, grade: A+, Webster University, course: BUSN 6120-2R, language: English, abstract: When reflecting on technology, and the progress that we have made in the last ten years, it is hard to imagine where we would be today without it. We as a society have integrated technology into our lives every single day. A large part of this is due to the ability to connect to the world with our fingertips whenever and wherever we may be. Whether we are surfing the web, listening to music, face timing with our friends and or loved ones, or simply checking in on our social networks. Technology has become a norm and a hygiene factor of our society that most of us could not live without. Apple Inc. and its former CEO, Steve Jobs deserve a substantial amount of credit for these changes. They have led the way in innovation, user friendliness, and ascetically pleasing products that many have tried to contend with and have had no success. Apple Inc. has created a brand so powerful, that their products themselves have become fashionable and almost a never-ending trend. Their brand loyalty is so deep that consumers will stand in lines for not hours but, days awaiting the release of the newest product, even if the changes that are made to it are minimal. They

are the first and only company to create a line of products that seamlessly integrate together, and are accessible anywhere with a cellphone signal. However, many question the company's viability due to the recent passing of former CEO Steve Jobs. Will Apple Inc. be able to continue in its predecessor's footsteps? Or will Apple Inc. dwindle away like last years fashion trend? This paper will examine Apple Inc. using a SWOT Analysis, and will bring to light Apple Inc. areas of strengths, weaknesses, opportunities and threats.

In the last few years, competition has become increasingly more complex, variable and dynamic, as can be seen in phenomena like globalization and technological acceleration. To cope with the dynamism and uncertainty of competition, enterprises need capabilities that enable them to respond to competition, as well as to improve their analytical skills and knowledge in order to better manage new strategic projects. Strategic analysis uses both quantitative and qualitative tools to understand both competitive contexts and available company resources. In *Strategic Analysis: Processes and Tools*, author Andrea Beretta Zanoni develops a theory of strategic analysis and offers models for the application of strategic analysis tools during all phases of the process including planning and decision-making, the development of control, and the formulation of a strategic diagnosis.
