characterisation of a variety of advanced materials. Topics include structure and electronic properties, modeling, processing, high-temperature chemistry, oxidation and corrosion, mechanical behaviour, manufacturing and applications. The volume complements more specialised books on specific materials as well as more general texts on ceramics or hard materials, presenting a survey of materials research as a key to technological development. After decades of research, the materials are being used in electronics, wear resistant, refractory and other applications, but numerous new applications are possible. Roughly equal numbers of papers cover theoretical and experimental research in the general field of materials science of refractory materials. Audience: Researchers and graduate students in materials science and engineering.

ceramics where either high temperature strength or stability is of primary importance. In recent years there has been a growing awareness of the interesting electrical, thermal and optical properties exhibited by these materials, and the fact that many can be prepared as monolithic ceramics, single crystals and thin films. In practical terms carbides, nitrides and borides offer the prospect of a new generation of semiconductor materials, for example, which can function at very high temperatures in severe environmental conditions. However, as yet, we have only a limited understanding of the detailed physics and chemistry of the materials and how the preparation techniques influence the properties. Under the auspices of the NATO Science Committee an Advanced Research Workshop (ARW) was held on the Physics and Chemistry of Carbides, Nitrides and Borides (University of Manchester, 18-22 September, 1989) in order to assess progress to date and identify the most promising themes and materials for future research. An international group of 38 scientists considered developments in 5 main areas: The preparation of powders, monolithic ceramics, single crystals and thin films; Phase transformations, microstructure, defect structure and mass transport; Materials stability; Theoretical studies; Electrical, thermal and optical properties of bulk materials and thin films.

This book examines the processes of economic and political reform in Tunisia, placing the current policies of Zine el Abidine Ben Ali within their historical context. The book develops a theoretical understanding of the relationship between economic liberalisation and political change in the Arab world, developing the concept of the disarticulation of the corporatist state and concluding that, despite efforts at democratization, an authoritarian political system is a more likely successor in the era of economic transformation.

The purpose of this book is to help engineers and scientists better understand dense nonaqueous phase liquid (DNAPL) contamination of groundwater and the methods and technology used for characterization and remediation. Remediation of DNAPL source zones is very difficult and controversial and must be based on state-of-the-art knowledge of the behavior (transport and fate) of nonaqueous phase liquids in the subsurface and site specific geology, chemistry and hydrology. This volume is focused on the characterization and remediation of nonaqueous phase chlorinated solvents and it is hoped that mid-level engineers and scientists will find this book helpful in understanding the current state-of-practice of DNAPL source zone management and remediation.

Pandemics. The word conjures up images of horrific diseases sweeping the globe and killing everyone in their path. But such highly lethal illnesses almost never create pandemics. The reality is deadly serious but far more subtle. In *Pandemics: What Everyone Needs to Know®*, Peter Doherty, who won the Nobel Prize for his work on how the immune system recognizes virus-infected cells, offers an essential

guide to one of the truly life-or-death issues of our age. In concise, question-and-answer format, he explains the causes of pandemics, how they can be counteracted with vaccines and drugs, and how we can better prepare for them in the future. Doherty notes that the term "pandemic" refers not to a disease's severity but to its ability to spread rapidly over a wide geographical area. Extremely lethal pathogens are usually quickly identified and confined. Nevertheless, the rise of high-speed transportation networks and the globalization of trade and travel have radically accelerated the spread of diseases. A traveler from Africa arrived in New York in 1999 carrying the West Nile virus; one mosquito bite later, it was loose in the ecosystem. Doherty explains how the main threat of a pandemic comes from respiratory viruses, such as influenza and SARS, which disseminate with incredible speed through air travel. The climate disruptions of global warming, rising population density, and growing antibiotic resistance all complicate efforts to control pandemics. But Doherty stresses that pandemics can be fought effectively. Often simple health practices, especially in hospitals, can help enormously. And research into the animal reservoirs of pathogens, from SARS in bats to HIV in chimpanzees, show promise for our prevention efforts. Calm, clear, and authoritative, Peter Doherty's *Pandemics* is one of the most critically important additions to the What Everyone Needs to Know® series. What Everyone Needs to Know® is a registered trademark of Oxford University Press.

production, from growing grain to raising cows. Since the early-20th century, industrial farming and global capitalism have worked hand-in-hand to provide meat at an ever cheaper price. And our appetites, so tempted, have led us to consume more and more animals. In the US, each citizen eats on average 120kg of meat per year. And they're not alone. Our insatiable desire for meat has defined how we use our planet. But cheap meat comes at a price. Planet Carnivore gets under the skin of the health problems that over-consumption brings; of modern farming's destructive use of resources; and of the stretched and strained farms and abattoirs that lead to horsemeat in beef burgers and challenging moral questions about our relationship with our food. Alex Renton's brilliantly researched, utterly compelling Guardian Short serves up the grisly stories, and also looks at how we are beginning to try and pay the cheap meat bill, from innovative twists on current techniques to cutting-edge scientific breakthroughs.

The lead singer on Supercell's eponymous first album is Hatsune Miku—a Vocaloid character created by Crypton Future Media with voice synthesizers. A virtual superstar, over 100,000 songs, uploaded mostly by fans, are attributed to her. Supercell is a Japanese creator music group with the composer Ryo leading ten artists, who design album illustrations and make music videos. These videos are uploaded onto Niconico and other video-sharing sites. By the time Supercell was released in March 2009, the group's Vocaloid works were already well-known to Niconico users and fans. This book explores the Vocaloid and DTM (desktop music) phenomena through the lenses of media and fan studies, looking closely at online social media platforms, the new technology for composing, avid fans of the Vocaloid character, and these fans' performative practices. It provides a sense of how interactive new media and an empowered fan base combine to engage in the creation processes and enhance the circulation of DTM works. 33 1/3 Global, a series related to but independent from 33 1/3, takes the format of the original series of short, music-based books and brings the focus to music throughout the world. With initial volumes focusing on Japanese and Brazilian music, the series will also include volumes on the popular music of Australia/Oceania, Europe, Africa, the Middle East, and more.

In *Shift*, Carlos Ghosn, the brilliant, audacious, and widely admired CEO of Nissan, recounts how he took the reins of the nearly bankrupt Japanese automotive company and achieved one of the most remarkable turnarounds in automotive—and corporate—history. When Carlos Ghosn (pronounced like “phone”) was named COO of Nissan in 1999, the company was running out of gas and careening toward bankruptcy. Eighteen short months later, Nissan was back in the black, and within several more years it had become the most profitable large automobile company in the world. In *SHIFT*, Ghosn describes how he went about accomplishing the seemingly impossible, transforming Nissan once again into a powerful global automotive manufacturer. The Brazilian-born, French-educated son of Lebanese parents, Ghosn first learned the management principles and practices that would shape his decisions at Nissan while rising through the ranks at Michelin and Renault. Upon his arrival at Nissan, Ghosn began his new position by embarking on a three-month intensive examination of every aspect of the

business. By October 1999 he was ready to announce his strategy to turn the company around with the Nissan Revival Plan. In the plan, he consistently challenged the tradition-bound thinking and practices of Japanese business when they inhibited Nissan's effectiveness. Ghosn closed plants, laid off workers, broke up long-standing supply networks, and sold off marginal assets to focus on the company's core business. But slashing costs was just the first step in Nissan's recovery. In fact, Ghosn introduced changes in every corner of the company, from manufacturing and engineering to marketing and sales. He updated Nissan's car and truck lineup, took risks on dynamic new designs, and demanded improvements in quality—strategies that quickly burnished Nissan's image in the marketplace, and re-established the company in the minds of consumers as a leader in innovation and engineering. Like the best-selling memoirs of Jack Welch, Lou Gerstner, and Larry Bossidy, SHIFT is a fascinating behind-the-scenes look at what it takes to transform and re-create a world-class company. Written by one of the world's most successful and acclaimed CEOs, SHIFT is an invaluable guide for business readers everywhere.

Drawing on ethnographic fieldwork within the World Bank and a Ugandan ministry, this book critically examines how the new aid architecture recasts aid relations as a partnership. While intended to alter an asymmetrical relationship by fostering greater recipient participation and ownership, this book demonstrates how donors still seek to retain control through other indirect and informal means. The concept of developmentality shows how the World Bank's ability to steer a client's behavior is disguised by the underlying ideas of partnership, ownership, and participation, which come with other instruments through which the Bank manipulates the aid recipient into aligning with its own policies and practices.
