This dissertation elaborates differences and similarities of forms of ethical behaviour in general and analyses whether German consumers differentiate between different types of ethical behaviour in particular. The thesis is characterised by its intensive combination of theoretical and empirical research. It furthermore contributes to the literature as the method triangulation applied in the different surveys reveals previously unknown relationships between different kinds of ethical behaviour, such as ethical consumption and charitable giving, as well as between different forms of ethical products. Choice experiment, latent class analysis, information display matrix and item-based attitude assessment allowed the comparison of stated and revealed preferences as well as an analysis of the relevance of ethical product features within the context of different product and process attributes. The dissertation provides insights into a research field which is becoming more and more relevant and improves the understanding of consumers' assessment and the interdependencies of the possibilities of ethical behaviour. This allows the development of recommendations for consumer policy makers, business and NGOs concerned with the ethics of consumer choice as well as future research on ethical behaviour in general and ethical consumption in particular.

A classic treatise that defined the field of applied demand analysis, *Consumer Demand in the United States: Prices, Income, and Consumption Behavior* is now fully updated and expanded for a new generation. Consumption expenditures by households in the United States account for about 70% of America's GDP. The primary focus in this book is on how households adjust these expenditures in response to changes in price and income. Econometric estimates of price and income elasticities are obtained for an exhaustive array of goods and services using data from surveys conducted by the Bureau of Labor Statistics and aggregate consumption expenditures from the National Income and Product Accounts, providing a better understanding of consumer demand. Practical models for forecasting future price and income elasticities are also demonstrated. Fully revised with over a dozen new chapters and appendices, the book revisits the original Houthakker-Taylor models while examining new material as well, such as the use of quantile regression and the stationarity of consumer preference. It also explores the emerging connection between neuroscience and consumer behavior, integrating the economic literature on demand theory with psychology literature. The most comprehensive treatment of the topic to date, this volume will be an essential resource for any researcher, student or professional economist working on consumer behavior or demand theory, as well as investors and policymakers concerned with the impact of economic fluctuations.

This short study aims to evaluate the Draft Common Frame of Reference in terms of social justice. In particular, it addresses the idea of a European notion of social justice, the relationship between private law and democracy, the question whether the DCFR can be regarded as a neo-liberal or socialist project, the values and principles underlying the DCFR, the protection of weaker parties, and the role of general clauses such as good faith.

The assumption that competition law and consumer protection are mutually reinforcing is rarely challenged. The theory seems uncontroversial. However, because a positive interaction between the two is presumed to be self-evident, the frequent conflicts that do in fact arise are often dealt with on an ad hoc basis, with no overarching legal authority. There is a clear need for a detailed and coherent understanding of exactly where the complements and tensions between the two policy areas exist. Dr Cseres in-depth analysis provides that understanding. Proceeding from the dual perspective of law and economics that is, of justice, fairness, and reasonableness on the one hand, and of efficiency of the other she fully considers such underlying issues as the following: the role of competition law and consumer law in a free market economy; the notion of consumer welfare; the effect of the modernisation of EC competition law for consumers; economics theories of information, bounded rationality, and transaction costs; the special significance of vertical agreements and merger control; and, how consumers are affected by information asymmetries. The ultimate focus of the book is on current and emerging EC law, in which a rapprochement between the two areas seems to be under way. Dr. Cseres provides a knowledgeable guide to the various strands of theory, policy, and jurisprudence that (she shows) ought to be taken into account in the process, including schools of thought and law and policy experience in both Europe and the United States. A special chapter on Hungary, where post-1989 law and practice reveal a fresh and distinctly forward-looking understanding of the matter, is one of the book's most extraordinary features. Explore the inevitable collapse of the fiat monetary system Paper Money Collapse: The Folly of Elastic Money, Second Edition challenges the mainstream consensus on money and monetary policy. While it is today generally believed that the transition from 'hard' and inflexible commodity money (such as a gold standard) to entirely flexible and potentially unlimited fiat money under national central banks allows for superior economic stability, Paper Money Collapse shows that the opposite is true. Systems of highly elastic and constantly expanding money are not only unnecessary, even for growing economies, they are always extremely destabilizing. Over time, they must lead to substantial imbalances, including excessive levels of debt and distorted asset prices, that will require ever faster money production to sustain. Ultimately, however, there is no alternative to a complete liquidation of these distortions. Based on insights of many renowned economists and in particular of the Austrian School of Economics, the book explains through rigorous logic and in precise language why our system of flexible fiat money is incompatible with a market economy and therefore unsustainable. Paper money systems have always led to economic disintegration—without exception—throughout history. It will not be different for our system and we may be closer to the endgame than many think. In October 2008 the European Commission published its Proposal for a Consumer Rights Directive which puts forward far-reaching changes to the core of consumer contract law: Four current directives are to be replaced by a new, overarching piece of legislation and in doing so full harmonisation for the most part is to take the place of the minimum standard presently in force in the EU. Although a welcome initiative, the extent and possible effects of the Proposal have certainly brought a number of issues to the fore. In January 2009, legal experts from universities, practice and the civil service met to address the points raised by the Proposal and the question of the extent to which it can indeed contribute to the modernisation and harmonisation of European consumer contract law. The papers

Geyer's Stationer

The literature of marketplace behaviour, long dominated by economic and psychological discourse, has matured in the last decade to reveal the vast expanse of consumption activity not adequately addressed - in either theoretical or empirical perspective - by the discipline's favoured approaches. The lived experience of consumption in cultural and historical context, rendered in a fashion that is both intellectually insightful and authentically evocative, and that recognizes the dynamics of accommodation and resistance that characterize the individual's relationship with the market, is the central interpretive thrust of an emerging interdisciplinary field inquiry broadly labelled "consumer culture theory." In this volume, some of the leading scholars of this field explore in great empirical detail and theoretical depth the relationships that the consumer has developed

both with goods and services and with the stakeholders that animate markets. Beginning with an examination of the underpinnings of cultural inquiry, the focus then shifts to specific consumption venues. Analyses of advertising in personal, critical and historical perspective, examination of lifestyle trends from dwelling practices of transnational nomads and regimes of personal training to genetic testing and gambling, interpretations of the dynamics of brand loyalty and corporate image management, and investigation of family consumption rituals are among the topics explored in ethnographic and humanistic perspective.

The Liberalization of Electricity and Natural Gas in the European Union

After a long period of prosperity and steady economic growth, the world's leading economies are now in crisis, and although there will be debate about its origins, the scale and seriousness of the crisis is in no doubt. There is also no doubt that excessive amounts of consumer credit, allied to a weak understanding of how globalised credit markets might react to a crisis, have played a significant part. This book, which is primarily about credit, debt and the trouble they have led to, is written by authors who have specialised in researching into over-indebtedness,

that is, situations in which an individual's debt burden has become overwhelming. For these authors the plight of individuals is a primary concern, but the wider issue is how credit is used and how it changes societies. The essays in this volume, addressing topics which are fundamental to our understanding of the current crisis, range widely across the whole sector of consumer finance, including mortgages, 'credit-binges', the regulation of consumer lending, insolvency, repayment plans, debt counselling and much more besides. The conclusions drawn from the book are equally wide-ranging, but above all the lesson learned from these essays is that the financialisation of contemporary life ensures that issues of the appropriate role of credit remain of critical importance in society.

Consumer Credit in Europe

Consumer credit has become a topical issue for researchers, regulators and the banking industry in Europe as a result of increasing market integration, regulatory changes and a growing tendency of households to use debt to finance consumption. This study uses a cross-country approach to look at a broad range of issues related to consumer credit in Europe. Focusing on both the supply and demand sides, it takes into account the structure and performance of financial intermediaries, the socio-demographic and economic profile of households and their risk of over-indebtedness, as well as the regulatory framework, such as the new Consumer Credit Directive. In the light of this analysis, measures for the

Consumer Credit and the American Economy examines the economics, behavioral science, sociology, history, institutions, law, and regulation of consumer credit in the United States. After discussing the origins and various kinds of consumer credit available in today's marketplace, this book reviews at some length the long run

growth of consumer credit to explore the widely held belief that somehow consumer credit has risen "too fast for too long." It then turns to demand and supply with chapters discussing neoclassical theories of demand, new behavioral economics, and evidence on production costs and why consumer credit might seem expensive compared to some other kinds of credit like government finance. This discussion includes review of the economics of risk management and funding sources, as well discussion of the economic theory of why some people might be limited in their credit search, the phenomenon of credit rationing. This examination includes review of issues of risk management through mathematical methods of borrower screening known as credit scoring and financial market sources of funding for offerings of consumer credit. The book then discusses technological change in credit granting. It examines how modern automated information systems called credit reporting agencies, or more popularly "credit bureaus," reduce the costs of information acquisition and permit greater credit availability at less cost. This discussion is followed by examination of the logical offspring of technology, the ubiquitous credit card that permits consumers access to both payments and credit services worldwide virtually instantly. After a chapter on institutions that have arisen to supply credit to individuals for whom mainstream credit is often unavailable, including "payday loans" and other small dollar sources of loans, discussion turns to legal structure and the regulation of consumer credit. There are separate chapters on the theories behind the two main thrusts of federal regulation to this point, fairness for all and financial disclosure. Following these

chapters, there is another on state regulation that has long focused on marketplace access and pricing. Before a final concluding chapter, another chapter focuses on two noncredit marketplace products that are closely related to credit. The first of them, debt protection including credit insurance and other forms of credit protection, is economically a complement. The second product, consumer leasing, is a substitute for credit use in many situations, especially involving acquisition of automobiles. This chapter is followed by a full review of consumer bankruptcy, what happens in the worst of cases when consumers find themselves unable to repay their loans. Because of the importance of consumer credit in consumers' financial affairs, the intended audience includes anyone interested in these issues, not only specialists who spend much of their time focused on them. For this reason, the authors have carefully avoided academic jargon and the mathematics that is the modern language of economics. It also examines the psychological, sociological, historical, and especially legal traditions that go into fully understanding what has led to the demand for consumer credit and to what the markets and institutions that provide these products have become today.
