Country Living Tiny Homes

ÊIf my present reader happens to be a Boy Scout or a scout-master who wants the scouts to build a tower for exhibition purposes, he can do so by following the directions here given, but if there is real necessity for haste in the erection of this tower, of course we cannot build one as tall as we might where we have more time. With a small tower all the joints may be quickly lashed together with strong, heavy twine, rope, or even wire; and in the wilderness it will probably be necessary to bind the joints with pliable roots, or cordage made of bark or withes; but as this is not a book on woodcraft we will suppose that the reader has secured the proper material for fastening the joints of the frame of this signal-tower and he must now shoulder his axe and go to the woods in order to secure the necessary timber. First let him cut eight straight polesÑthat is, as straight as he can find them. These poles should be about four and one half inches in diameter at their base and sixteen and one half feet long. After all the branches are trimmed off the poles, cut four more sticks each nine feet long and two and a half or three inches in diameter at the base; when these are trimmed into shape one will need twenty six or seven more stout sticks each four and one half feet long for braces and for flooring for the platform.

Home Work

In 2004, Lloyd Kahn discovered a group of unique carpenters along the Pacific Coast of North America. Over a two-year period, he made four trips north from his home in the San Francisco Bay Area, up the coast, shooting the photos that appear in this book. To preserve homeowners' privacy, specific locations are not given, but suffice to say this book focuses on the Pacific Coast north from San Francisco up to and around Vancouver Island, British Columbia, latitudes 37 to 49 degrees. There's been a vortex of creative carpentry energy in this part of the world over the last 30 years. Many of the builders shown here got started in the countercultural era of the '60s and '70s, and their work has never been shown in books or magazine articles.

The Tiny Book of Tiny Houses

This Old House meets Wayne's World in this zany guide to designing and building tiny homes Derek Diedricksen has always had a love for small, modest houses ever since his father gave him the book *Tiny Tiny Houses* by Lester Walker for his tenth birthday. Combining his artistic abilities, wild imagination, and his passion for small houses, he self-published *Humble Homes, Simple Shacks, Cozy Cottages, Ramshackle Retreats, Funky Forts, and Whatever the Heck Else we could Squeeze in Here* in 2009. This book is a collection of Diedricksen's creative/imaginative sketches for building small houses, shacks, cottages, and forts. The sketches are accompanied with hand-written commentary, both instructive and comical. Derek's main purpose is to get your creative juices flowing and encourage you to get off the couch and use your hands. Believing that specific building plans squash creativity, he avoids too many detailed instructions, giving you the chance to put your own creative spin on your very own small abode (even if it is just in your imagination).

Compact cities are cities wherein the supermarkets, offices, hospitals, and other important places are set around one area. Through urban planning, compact cities are created in order to reduce the space used, to minimize emissions from extensive car use and to preserve more rural areas and green spaces. This movement acknowledges the fact that the world, more than ever is in need of space. Our population is continually growing far beyond seven billion and yet the Earth, in its finiteness, remains the same. Of all the infrastructures that have to use the Earth's space, the largest portion comes not from the industries, but

from our residential homes, apartment buildings and condominiums – our living spaces. In the United States, the houses get bigger each year. It was just less than 1700 sq. ft in the 1970s and has now gone up to 2500 sq. ft in 2014. What's ironic here is that the families today are smaller than in the 1970s. In the United Kingdom meanwhile, the average one-bedroom house is merely 495 sq. ft or 46 sq. m and even a three-bedroom home is just 947 sq. ft on average. Yes, there is a huge gap between the US and the UK's average housing spaces but believe it or not, there are many more countries with less and less square footage, and yet, survey shows that these people are not less satisfied. What I am trying to say is that space is merely a matter of how you use it. Let me ask, how many rooms in your house are not used that it ended up being a storage cabinet? Or how many useless things or non-working appliances do you have in your kitchen that you don't dispose just because you don't want your cabinets to look empty? There are probably many of you who have these unused spaces in your homes. The thing is, you could've grown vegetables with that space, it could've saved you dollars or it could've been use for something else. With the growing movement for compact cities and the rising of global awareness on sustainability issues, it is time for us to rethink how much square footage we really need in our homes. This is what compact living is all about - it is maximizing your limited house space for you to create more living spaces that you never imagined existing in your small home.

Little House on a Small Planet

First published in 1978, Shelter II is a continuation of the subject areas originally covered in Shelter (1973), with a greater emphasis on construction techniques. Shelter II is the second in a series of books about people building their own homes in different parts of the world. The principles outlined in Shelter, published almost 40 years ago, seem even more important today: relearning the still-usable skills of the past and doing more hand work in providing life's necessities. Shelter II provides a basic manual of design and construction for the first time house-builder. The book begins with simple shelters still being built and lived in by people with minimal resources. They can be viewed for historical or anthropological interest, or as sensible, instructive examples of efficient construction by those who lack the choices available in industrialized societies. There are also personal accounts and seasoned advice from builders in different climates, with a variety of design approaches, construction techniques, and building materials. A home is still a place for working, resting, sharing, healing, dreaming—some things haven't changed that much.

Tiny House Design & Construction Guide

Tiny Houses

"From the publishers of a popular series of building books comes Small Homes, which is highly relevant for these times. Getting smaller, rather than larger. Some 75 builders share their knowledge of building and design, with artistic, practical, and/or economical homes in the United States, Canada, England, Scotland, France, Germany, Spain, New Zealand and Lithuania. This is the seventh in a series of highly-graphic books on homemade building, all of which are interrelated. The series, "The Shelter Library Of Building Books," include Shelter, Shelter II (1978), Home Work (2004), Builders of the Pacific Coast (2008), Tiny Homes (2012), and Tiny Homes on the Move (2014). Each of these books has over 1,000 photos, and each 2-page spread is carefully laid out with respect to balance of graphics and clarity of information. A running theme with them is that people have been inspired by one book to build their own home, and this will be included in a subsequent book. For example, many of the homes in Home Work were inspired by Shelter. And so on. The underlying theme with Shelter's books, which has continued for over 40 years, is that it's possible for you to create your own home with your own hands, using natural materials. Some of these homes are in the country, some in small towns, and some in large cities"--
