Devil May Care

Human well-being relies critically on ecosystem services provided by nature. Examples include water and air quality regulation, nutrient cycling and decomposition, plant pollination and flood control, all of which are dependent on biodiversity. They are predominantly public goods with limited or no markets and do not command any price in the conventional economic system, so their loss is often not detected and continues unaddressed and unabated. This in turn not only impacts human well-being, but also seriously undermines the sustainability of the economic system. It is against this background that TEEB: The Economics of Ecosystems and Biodiversity project was set up in 2007 and led by the United Nations Environment Programme to provide a comprehensive global assessment of economic aspects of these issues. This book, written by a team of international experts, represents the scientific state of the art, providing a comprehensive assessment of the fundamental ecological and economic principles of measuring and valuing ecosystem services and biodiversity, and showing how these can be mainstreamed into public policies. This volume and subsequent TEEB outputs will provide the authoritative knowledge and guidance to drive forward the biodiversity conservation agenda for the next decade.

“Keep away from MR. AURIC GOLDFINGER. He is a most powerful man. If he wished to crush you, he would only have to roll over in his sleep to do so.” OPERATION GRAND SLAM Secret agent James Bond had been warned not to tangle with Goldfinger. But the super-criminal’s latest obsession was too strong, too dangerous. He had to be stopped. Goldfinger was determined to take possession of half the supply of mined gold in the world—to rob Fort Knox! For this incredible venture he had enlisted the aid of the top criminals in the U.S., including a bevy of beautiful thieves from the Bronx. And he had conceived so foolproof a plan that it would take all of Bond’s unique talents to make it fail—as fail it must. JAMES BOND challenges GOLDFINGER, THE MOST EVIL GENIUS HE HAS EVER FACED. He’s a phenomenal criminal who likes his women dressed only in gold paint. He’s a magnificent fiend who carries his cash in gold bars. He’s a powerful villain who plans to pull the biggest and boldest crime in history—the robbery of all the gold in Fort Knox. “It’s all marvellously intricate and polished storytelling, all absurdly impossible, all superlative fun.”—Cleveland News. “We recommend Goldfinger for just what it is: sophisticated, tongue-in-cheek entertainment par excellence.”—Playboy Magazine. “If you like heroes heroic, a woman who proves, finally, that she’s all woman, and a villain who is a dirty dog, then Goldfinger is for you.”—Detroit Sunday Times.

Bond is back with a license to thrill. Forty-three years ago, Ian Fleming wrote his last great 007 adventure. Now, in Devil May Care, the world's most iconic spy returns in a Cold War story spanning the world's exotic locations. By invitation of the Fleming estate to mark the centenary of his birth, acclaimed novelist Sebastian Faulks picks up where Fleming left off, writing a tour de force that will electrify every James Bond fan. A fitting tribute to the Bond tradition, Devil May Care stands on its own as a triumph of witty prose and plenty of double-0 action. "In his house in Jamaica, Ian Fleming used to write a thousand words in the morning, then go snorkeling, have a cocktail, lunch on the terrace, more diving, another thousand words in the late afternoon, then more martinis and glamorous women. In my house in London, I followed this routine exactly, apart from the cocktails, the lunch, and the snorkeling." —Sebastian Faulks

Lying is like 95% of what I do. But believe me: in this book, I'll let you know exactly how to become a master spy just like me. Obviously, you won't be as good at it as I am, but that's because you're you, and I'm Sterling Archer. I know, I know, it sucks not being me. But don't beat yourself up about it, because I'm going to show you all the good stuff—what to wear; what to drink; how to seduce women (and, when necessary, men); how to beat up men (and, when necessary, women); how to tell the difference between call girls and hookers (hint: when they're dead, they're just hookers) and everything about weapons, secret devices, lying ex-girlfriends, and turtlenecks. In a word? How to Archer.

This book directly addresses a long-felt, unsatisfied need of modern color science - an appreciative and technically sound presentation of the principles and main offerings of colorimetry to artists and designers, written by one of them. With his unique blend of training and experience in engineering, with his lifelong interest and, latterly, career in art and art education, Dr. Agoston is unusually well prepared to convey the message of color science to art and design. His book fulfills the hopes I had when I first heard about him and his book. I foresee important and long-lasting impacts of this book, analogous to those of the epoch-making writings by earlier artist-scientists, such as Leonardo, Chevreul, Munsell, and Pope. Nearly all persons who have contributed to color science, recently as well as formerly, were attracted to the study of color by color in art. Use of objective or scientific methods did not result from any cold, detached attitude, but from the inherent difficulties of the problems concerning color and its use, by which they were intrigued. Modern education and experience has taught many people how to tackle difficult problems by use of scientific methods. Therefore - color science.

Written by two certified human factors/ergonomics professionals and a criminalist and firearms expert, all of whom have testified as expert witnesses, Human Factors in Handgun Safety and Forensics draws on their formidable collective

knowledge and professional experience to present the first scientifically based volume in the field. This seminal work identifies numerous human factors in handgun design, training, and related human behavior in unintentional and inadvertent shooting incidents. The book provides an overview of handgun use in general but focuses on firearm handling in unintentional and inadvertent shootings. It describes the discipline of human factors and ergonomics and includes available statistics on shootings, examines their limitations, and reviews actual cases to determine human causes in unintentional and inadvertent shootings. It provides a history of firearms and details the components and mechanics of handguns and ammunition to reveal safety problems in current designs. It explains the fundamentals of shooting and how violation of those principles can result in unintentional or inadvertent shootings. The authors stress the importance of firearms safety training. They evaluate various safety training programs (including those from the National Rifle Association), investigate inconsistencies in basic safety rules, and make suggestions to improve safety training. The importance of instructor training is also emphasized. The book concludes with a summary and application of the previous topics to forensic and investigative settings and gives advice for human factors/ergonomics professionals as expert witnesses. The book comes with an accompanying DVD with hundreds of color photos to support the topics covered in the text.

The book covers a wide range of topics, including decision making, optimization, supply chain management and quality control.

Color Theory and Its Application in Art and Design

At a time when most handguns were limited to six rounds, the ten-shot Mauser caught the attention of the world for its unprecedented firepower and formidable high-velocity 7.63×25mm cartridge. This saw its ultimate expression in the first-ever select-fire handgun – the 'Schnellfeuer' machine pistol, fed by a detachable magazine and offering both full-automatic and single-shot modes. The C 96 was the first semi-automatic pistol to see combat, arming both sides in the Second Anglo-Boer War, and seeing service with the German, Russian, Chinese and other militaries. Widely purchased commercially, it was carried by none other than Winston Churchill in the Sudan and South Africa, became prized by the Irish Republican Army and Soviet revolutionaries, and even armed Han Solo in the 'Star Wars' movies. Featuring full-colour artwork and an array of revealing photographs, this is the engrossing story of the C 96 Broomhandle Mauser, the ground-breaking semi-automatic pistol that armed a generation of military personnel, adventurers and revolutionaries at the turn of the 20th century.

Essential reading for forensic scientists, firearms examiners, defense and prosecution practitioners, the judiciary, and police force, this book is also a helpful reference guide for undergraduate and graduate forensic science students.

The Economics of Ecosystems and Biodiversity: Ecological and Economic Foundations

In Quantitative Ammunition Selection, Charles Schwartz presents an accessible mathematical model that allows armed professionals and lawfully-armed citizens to evaluate the terminal ballistic performance of self-defense ammunition using

water as a valid ballistic test medium. Based upon a modified fluid dynamics equation that correlates highly ($r=+0.94$) to more than 800 points of manufacturer- and laboratory-test data, the quantitative model allows the armed professional to generate ballistic test results equivalent to those obtained in calibrated 10 percent ordnance gelatin. Using data generated from water tests, the quantitative model accurately predicts the permanent wound cavity volume and mass, terminal penetration depth (+/- 1cm), and exit velocity of handgun projectiles as these phenomena would occur in calibrated 10 percent ordnance gelatin and soft tissue. A retired law enforcement professional, Schwartz provides a concise explanation of the relevant principles of mechanics, fluid dynamics, and thermodynamics pertaining to the model and its derivation. The quantitative model is clearly presented with illustrated computational examples that provide guidance to the armed professional in every aspect of the model's application.
