This volume includes versions of papers selected from those presented at the THIESEL 2000 Conference on Thermofluidynamic Processes in Diesel Engines, held at the Universidad Politecnica de Valencia, during the period of September th th 13

to 15 , 2000. The papers are grouped into seven thematic areas: State of the Art and Prospective, Fuels for Diesel Engines, Injection System and Spray Formation, Combustion and Pollutant Formation, Modelling, Experimental Techniques, and Air Management. These areas cover most of the technologies and research strategies that may allow Light Duty and Heavy Duty Diesel engines to comply with current and forthcoming emission standards, while maintaining or improving fuel consumption. The main objectives of the conference were to bring together ideas and experience from Industry and Universities to facilitate interchange of information and to promote discussion of future research and development needs. The technical papers emphasised the use diagnostic and simulation techniques and their relationship to engineering practice and the advancement of the Diesel engine. We hope that this approach, which proved to be successful at the Conference, is reflected in this volume. We thank all those who contributed to the success of the Conference, and particularly the members of the Advisory Committee who assessed abstracts and chaired many of the technical sessions. We are also grateful to participants who presented their work or contributed to the many discussions. Finally, the Conference benefitted from financial support from the organisations listed below and we are glad to have this opportunity to record our gratitude.

International Industrial Networks and Industrial Restructuring in Central and Eastern Europe analyses the role of international industrial networks in industrial restructuring and corporate growth in central Europe, Russia and Ukraine. It shows that two distinct patterns of international industrial integration - domestic vs. foreign led modernisations - have developed in these two regions which have significant effects on patterns of growth and integration of these economies. International Industrial Networks and Industrial Restructuring in Central and Eastern Europe is based on a number of industry and firm case studies which are analysed and interpreted within the current international business and political economy literature. The publication provides valuable insights to managers and

policy-makers who are interested in understanding different strategic options for business activity in Central and East European countries. For the academic reader, it offers a new perspective on international, industrial networks in which theories on strategic management and on industry restructuring and corporate growth are merged into a new view of growth and transformation process.
