Mobile working and remote working from home or a small office, using phone, PC, fax and narrowband Internet is a rapidly increasing practice. The many well-documented benefits of working this way include higher productivity, more time spent with the family and local community and less time wasted commuting. At a community level they include benefits to the environment through substituting physical transport by telecommunications, and re-vitalisation of rural communities. Yet, people who work mainly this way face severe problems: a loss of contact with the office grapevine, the out of sight, out of mind syndrome, and exclusion from vital ad-hoc meetings and tutorials. Another major problem is slow speed of communication. This volume summarizes how technologies can revolutionise flexible working practices and go a long way towards solving the isolation problems of flexible workers.

### **Pricing Debit Card Payment Services**

Presents a collection of papers from the Financial Cryptography Conference 2001.

### **Advances in Banking Technology and Management: Impacts of ICT and CRM**

This paper presents a theoretical framework for analyzing pricing structures in debit card schemes featuring cardholders, retailers, their respective banks, and a network routing switch. The network routing switch controls the electronic debit card network and is jointly owned by the banks. In setting its prices, it needs to consider getting both consumers and retailers to participate in the market. In this

two-sided market for debit cards, we show that the "double-monopolistic" network routing switch may want to supply consumers with cheap debit cards, deriving profits from charging a high retailer fee per transaction. This theoretic result resembles the current practice in the Netherlands where consumers pay no transaction fee, but retailers do. This corner solution carries over when we analyze socially optimal pricing.

Electronic commerce is here to stay. No matter how big the dot-com crisis was or how far the e-entrepreneurs' shares fell in the market, the fact remains that there is still confidence in electronic trading. At least it would appear that investors are confident in e-companies again. However, not only trust of venture capitalists is of importance -- consumers also have to have faith in on-line business. After all, without consumers there is no e-business. Interacting lawyers, technicians and economists are needed to create a trustworthy electronic commerce environment. To achieve this environment, thorough and inter-disciplinary research is required and that is exactly what this book is about. Researchers of the project Enabling Electronic Commerce from the Dutch universities of Tilburg and Eindhoven have chosen a number of e-topics to elaborate on trust from their point of view. This volume makes clear that the various disciplines can and will play a role in developing conditions for trust and thus contribute to a successful electronic market.
